The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2012 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Description:

- 2006: Estimate based on coverage reported by national government. Pneumococcal conjugate vaccine introduced during 2006. GoC=R+
- 2007: Estimate based on coverage reported by national government. GoC=R+
- 2008: Estimate based on interpolation between reported values. Reported data excluded. As nationally reported data are based on a three year rolling basis, year-to-year changes are not accounted for. GoC=No accepted empirical data
- 2009: Estimate based on interpolation between reported values. Reported data excluded. As nationally reported data are based on a three year rolling basis, year-to-year changes are not accounted for. GoC=No accepted empirical data
- 2010: Estimate based on coverage reported by national government. Estimate of 37 percent changed from previous revision value of 74 percent. GoC=R+
- 2011: Estimate based on interpolation between reported values. Reported data excluded. As nationally reported data are based on a three year rolling basis, year-to-year changes are not accounted for. Estimate of 50 percent changed from previous revision value of 74 percent. GoC=No accepted empirical data
- 2012: Estimate based on interpolation between reported values. Reported data excluded. As nationally reported data are based on a three year rolling basis, year-to-year changes are not accounted for. Estimate of 62 percent changed from previous revision value of 74 percent. GoC=No accepted empirical data
- 2013: Estimate based on coverage reported by national government. GoC=R+
