Survey	NA	NA	NA	NA	NA	NA	NA	NA	89	NA	NA	NA

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2012 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

## Description:

- 2003: Reported data calibrated to 1998 and 2011 levels. Estimate of 95 percent changed from previous revision value of 99 percent. GoC=D+
- 2004: Reported data calibrated to 1998 and 2011 levels. Estimate of 95 percent changed from previous revision value of 99 percent. GoC=D+
- 2005: Reported data calibrated to 1998 and 2011 levels. Estimate of 93 percent changed from previous revision value of 99 percent. GoC=D+
- 2006: Reported data calibrated to 1998 and 2011 levels. Estimate of 93 percent changed from previous revision value of 99 percent. GoC=D+
- 2007: Reported data calibrated to 1998 and 2011 levels. Estimate of 92 percent changed from previous revision value of 99 percent. GoC=D+

Survey	NA	NA	NA	NA	NA	NA	NA	NA	66	NA	NA	NA

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2012 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

## Description:

- 2003: Reported data calibrated to 1997 and 2011 levels. Estimate of 85 percent changed from previous revision value of 93 percent. GoC=D+
- 2004: Reported data calibrated to 1997 and 2011 levels. Estimate of 90 percent changed from previous revision value of 99 percent. Estimate challenged by: D-
- 2005: Reported data calibrated to 1997 and 2011 levels. Estimate of 89 percent changed from previous revision value of 99 percent. Estimate challenged by: D-
- 2006: Reported data calibrated to 1997 and 2011 levels. Estimate of 89 percent changed from previous revision value of 99 percent. Estimate challenged by: D-
- 2007: Reported data calibrated to 1997 and 2011 levels. Estimate of 87 percent changed from previous revision value of 99 percent. GoC=D+
- 2008: Reported data calibrated to 1997 and 2011 levels. Estimate of 84 percent changed from previous revision value of 98 percent. GoC=D+
- 2009: Reported data calibrated to 1997 and 2011 levels. Estimate of 84 percent changed from previous revision value of 99 percent. GoC=S+ D+
- 2010: Reported data calibrated to 1997 and 2011 levels. Estimate of 82 percent changed from previous revision value of 99 percent. GoC=S+ D+
- 2011: Survey evidence does not support reported data. Estimate based on survey results. Survey evidence of 82 percent based on 1 survey(s). Kingdom of Tonga Demographic and Health Survey 2012 card or history results of 66 percent modified for recall bias to 82 percent based on 1st dose card or history coverage of 86 percent, 1st dose card only coverage of 48 percent and 3d dose card only coverage of 46 percent. Estimate of 82 percent changed from previous revision value of 99 percent. Estimate challenged by: D-R-
- 2012: Reported data calibrated to 2011 levels. Estimate of 77 percent changed from previous revision value of 95 percent. Estimate challenged by: D-
- 2013: Reported data calibrated to 2011 levels. Estimate of 82 percent changed from previous revision value of 99 percent. GoC=S+
- 2014: Reported data calibrated to 2011 levels. GoC=No accepted empirical data
