Survey	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2012 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

United Kingdom of Great Britain and Northern Ireland - DTP1

GBR - DTP1

Description:

- 2003: Estimate based on DTP3 coverage of 91. Reported childhood vaccination coverage is calculated using data extracted from national population based computerised registers which represent all children and collated centrally. GoC=No accepted empirical data
- 2004: Estimate based on DTP3 coverage of 92. GoC=No accepted empirical data
- 2005: Estimate based on DTP3 coverage of 91. GoC=No accepted empirical data
- 2006: Estimate based on DTP3 coverage of 92. GoC=No accepted empirical data
- 2007: Estimate based on DTP3 coverage of 92. GoC=No accepted empirical data
- 2008: Estimate based on DTP3 coverage of 92. GoC=No accepted empirical data
- 2009: Estimate based on DTP3 coverage of 93. GoC=No accepted empirical data
- 2010: Estimate based on DTP3 coverage of 94. GoC=No accepted empirical data
- 2011: Estimate based on DTP3 coverage of 95. GoC=No accepted empirical data
- 2012: Estimate based on DTP3 coverage of 95. Estimate of 98 percent changed from previous revision value of 99 percent. GoC=No accepted empirical data
- 2013: Estimate based on DTP3 coverage of 95. GoC=No accepted empirical data
- 2014: Estimate based on DTP3 coverage of 95. The United Kingdom utilizes a child health information system to estimate vaccination coverage for the routine childhood immunization coverage. The system has been described in Amirthalingam and colleagues (2012) publication available online at online: <http://www.eurosurveillance.org>. GoC=No accepted empirical data

While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2012 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Description:

- 2010: Estimate based on coverage reported by national government. Pneumococcal conjugate vaccine introduced in 2006, reporting started in 2010. PcV is recommended at 2,4 months and 13 months of age. Reported data reflect coverage among children aged 24 months. GoC=R+ D+
- 2011: Estimate based on coverage reported by national government. GoC=R+
- 2012: Estimate based on coverage reported by national government. Estimate of 92 percent changed from previous revision value of 95 percent. GoC=R+
- 2013: Estimate based on coverage reported by national government. Estimate of 93 percent changed from previous revision value of 95 percent. GoC=R+
- 2014: Estimate based on coverage reported by national government. The United Kingdom utilizes a child health information system to estimate vaccination coverage for the routine childhood immunization coverage. The system has been described in Amirthalingam and colleagues (2012) publication available online at online: <http://www.eurosurveillance.org>. GoC=R+ D+
