

**BACKGROUND NOTE:** Each year WHO and UNICEF jointly review reports submitted by Member States regarding national immunization coverage, finalized survey reports as well as data from the published and grey literature. Based on these data, with due consideration to potential biases and the views of local experts, WHO and UNICEF attempt to distinguish between situations where the available empirical data accurately reflect immunization system performance and those where the data are likely to be compromised and present a misleading view of immunization coverage while jointly estimating the most likely coverage levels for each country.

WHO and UNICEF estimates are country-specific; that is to say, each country's data are reviewed individually, and data are not borrowed from other countries in the absence of data. Estimates are not based on ad hoc adjustments to reported data; in some instances empirical data are available from a single source, usually the nationally reported coverage data. In cases where no data are available for a given country/vaccine/year combination, data are considered from earlier and later years and interpolated to estimate coverage for the missing year(s). In cases where data sources are mixed and show large variation, an attempt is made to identify the most likely estimate with consideration of the possible biases in available data. For methods see:

\*Burton et al. 2009. WHO and UNICEF estimates of national infant immunization coverage: methods and processes.

\*Burton et al. 2012. A formal representation of the WHO and UNICEF estimates of national immunization coverage: a computational logic approach.

\*Brown et al. 2013. An introduction to the grade of confidence used to characterize uncertainty around the WHO and UNICEF estimates of national immunization coverage.

## DATA SOURCES.

**ADMINISTRATIVE coverage:** Reported by national authorities and based on aggregated administrative reports from health service providers on the number of vaccinations administered during a given period (numerator data) and reported target population data (denominator data). May be biased by inaccurate numerator and/or denominator data.

**OFFICIAL coverage:** Estimated coverage reported by national authorities that reflects their assessment of the most likely coverage based on any combination of administrative coverage, survey-based estimates or other data sources or adjustments. Approaches to determine OFFICIAL coverage may differ across countries.

**SURVEY coverage:** Based on estimated coverage from population-based household surveys among children aged 12-23 months or 24-35 months following a review of survey methods and results. Information is based on the combination of vaccination history from documented evidence or caregiver recall. Survey results are considered for the appropriate birth cohort based on the period of data collection.

## ABBREVIATIONS

**BCG:** percentage of births who received one dose of Bacillus Calmette Guerin vaccine.

**DTP1 / DTP3:** percentage of surviving infants who received the 1st / 3rd dose, respectively, of diphtheria and tetanus toxoid with pertussis containing vaccine.

**Pol3:** percentage of surviving infants who received the 3rd dose of polio containing vaccine. May be either oral or inactivated polio vaccine.

**IPV1:** percentage of surviving infants who received at least one dose of inactivated polio vaccine. In countries utilizing an immunization schedule recommending either (i) a primary series of three doses of oral polio vaccine (OPV) plus at least one dose of IPV where OPV is included in routine

immunization and/or campaign or (ii) a sequential schedule of IPV followed by OPV, WHO and UNICEF estimates for IPV1 reflect coverage with at least one routine dose of IPV among infants <1 year of age among countries. For countries utilizing IPV containing vaccine use only, i.e., no recommended dose of OPV, the WHO and UNICEF estimate for IPV1 corresponds to coverage for the 1st dose of IPV.

Production of IPV coverage estimates, which begins in 2015, results in no change of the estimated coverage levels for the 3rd dose of polio (Pol3). For countries recommending routine immunization with a primary series of three doses of IPV alone, WHO and UNICEF estimated Pol3 coverage is equivalent to estimated coverage with three doses of IPV. For countries with a sequential schedule, estimated Pol3 coverage is based on that for the 3rd dose of polio vaccine regardless of vaccine type.

**MCV1:** percentage of surviving infants who received the 1st dose of measles containing vaccine. In countries where the national schedule recommends the 1st dose of MCV at 12 months or later based on the epidemiology of disease in the country, coverage estimates reflect the percentage of children who received the 1st dose of MCV as recommended.

**MCV2:** percentage of children who received the 2nd dose of measles containing vaccine according to the nationally recommended schedule.

**RCV1:** percentage of surviving infants who received the 1st dose of rubella containing vaccine. Coverage estimates are based on WHO and UNICEF estimates of coverage for the dose of measles containing vaccine that corresponds to the first measles-rubella combination vaccine. Nationally reported coverage of RCV is not taken into consideration nor are the data represented in the accompanying graph and data table.

**HepBB:** percentage of births which received a dose of hepatitis B vaccine within 24 hours of delivery. Estimates of hepatitis B birth dose coverage are produced only for countries with a universal birth dose policy. Estimates are not produced for countries that recommend a birth dose to infants born to HepB virus-infected mothers only or where there is insufficient information to determine whether vaccination is within 24 hours of birth.

**HepB3:** percentage of surviving infants who received the 3rd dose of hepatitis B containing vaccine following the birth dose.

**Hib3:** percentage of surviving infants who received the 3rd dose of Haemophilus influenzae type b containing vaccine.

**RotaC:** percentage of surviving infants who received the final recommended dose of rotavirus vaccine, which can be either the 2nd or the 3rd dose depending on the vaccine.

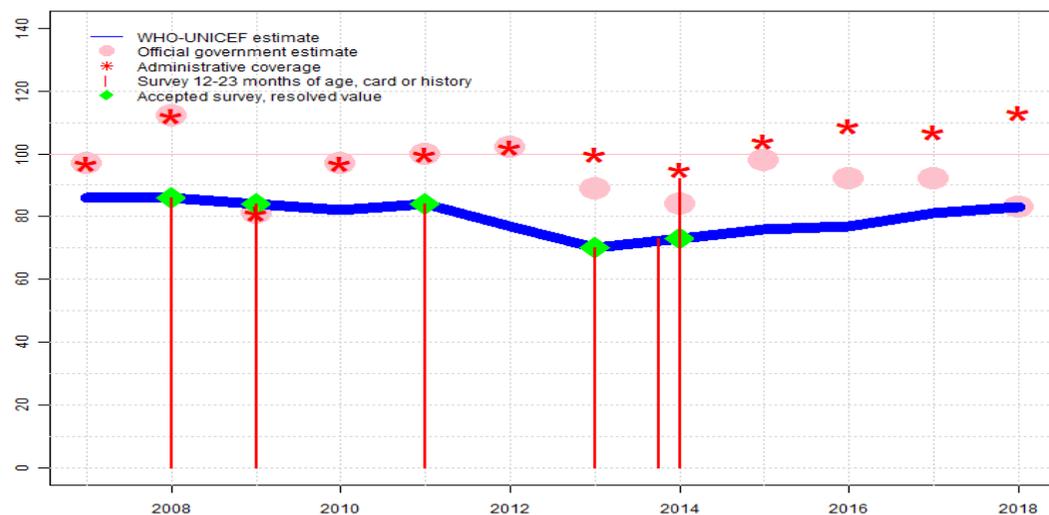

**PcV3:** percentage of surviving infants who received the 3rd dose of pneumococcal conjugate vaccine. In countries where the national schedule recommends two doses during infancy and a booster dose at 12 months or later based on the epidemiology of disease in the country, coverage estimates may reflect the percentage of surviving infants who received two doses of PcV prior to the 1st birthday.

**YFV:** percentage of surviving infants who received one dose of yellow fever vaccine in countries where YFV is part of the national immunization schedule for children or is recommended in at risk areas; coverage estimates are annualized for the entire cohort of surviving infants.

Survey	NA	86	84	NA	84	NA	70	*	NA	NA	NA	NA

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

## Description:

- 2018: Estimate based on reported official coverage that is based on 2018 DHS Key Indicators Report. Please see below. Estimate challenged by: D-
- 2017: Reported data calibrated to 2014 and 2018 levels. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Preliminary results for the 2017 birth cohort from the 2018 DHS support reported official coverage. Estimate of 81 percent changed from previous revision value of 73 percent. Estimate challenged by: D-R-
- 2016: Reported data calibrated to 2014 and 2018 levels. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Estimate of 77 percent changed from previous revision value of 73 percent. Estimate challenged by: D-R-
- 2015: Reported data calibrated to 2014 and 2018 levels. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Estimate of 76 percent changed from previous revision value of 73 percent. Estimate challenged by: D-R-
- 2014: Survey evidence does not support reported data. Estimate based on survey results. Survey evidence of 73 percent based on 1 survey(s). Expanded Programme of Immunization External Review, 2016 results ignored by working group. Coverage by card is higher than cards seen and other inconsistencies such as coverage with final doses higher than earlier doses in the series. Also, EPI survey results inconsistent with MICS for the same cohort and previous surveys. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Estimate challenged by: D-R-
- 2013: Survey evidence does not support reported data. Estimate based on survey results. Survey evidence of 70 percent based on 1 survey(s). Estimate challenged by: D-R-S-
- 2012: Estimate based on interpolation between 2011 and 2013 levels. Estimates based on survey results. Reported data excluded because 102 percent greater than 100 percent. Estimate challenged by: D-R-

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Survey	NA											

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

## Description:

Estimates for a dose of inactivated polio vaccine (IPV) begin in 2015 following the Global Polio Eradication Initiative's Polio Eradication and Endgame Strategic Plan: 2013-2018 which recommended at least one full dose or two fractional doses of IPV into routine immunization schedules as a strategy to mitigate the potential consequences should any re-emergence of type 2 poliovirus occur following the planned withdrawal of Sabin type 2 strains from oral polio vaccine (OPV).

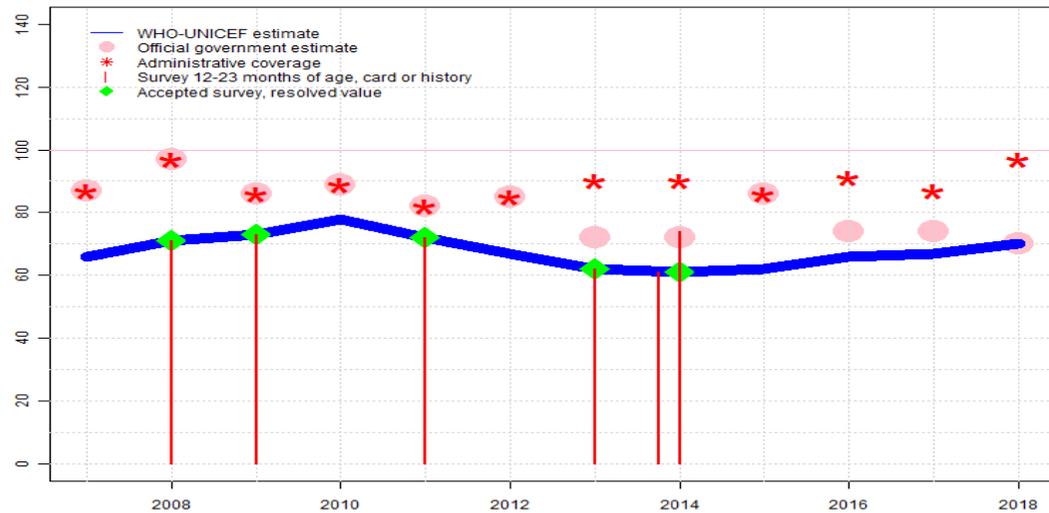

2018: Estimate based on estimated DTP3 coverage. Reported data excluded due to sudden change in coverage from 64 level to 91 percent. Estimate challenged by: D-R-

2017: Estimate based on the relation between reported DTP3 and IPV coverage. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Preliminary results for the 2017 birth cohort from the 2018 DHS support reported official coverage. Programme reports stock-out of IPV of unclear duration. Estimate challenged by: D-R-

2016: Estimate based on relation between reported DTP3 and IPV. Programme reports six month vaccine stock out. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. GoC=Assigned by working group. GoC assigned to maintain consistency across vaccines.

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

## Description:

- 2018: Estimate based on reported data adjusted for the relative relationship between estimated and reported coverage for DTP3. Estimate challenged by: D-R-
- 2017: Estimate based on the relation between reported DTP3 and RotaC coverage. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Preliminary results for the 2017 birth cohort from the 2018 DHS support reported official coverage. Estimate of 51 percent changed from previous revision value of 59 percent. Estimate challenged by: D-R-
- 2016: Estimate based on interpolation between estimate for 2014 and 2017. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Estimate challenged by: D-R-S-
- 2015: Estimate based on interpolation between estimate for 2014 and 2017. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. GoC=Assigned by working group. GoC assigned to maintain consistency across vaccines.
- 2014: Estimate based on survey results. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Rotavirus vaccine was introduced during 2014. GoC=Assigned by working group. GoC assigned to maintain consistency across vaccines.

Survey	NA	NA	NA	NA	NA	NA	49	*	NA	NA	NA	NA

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

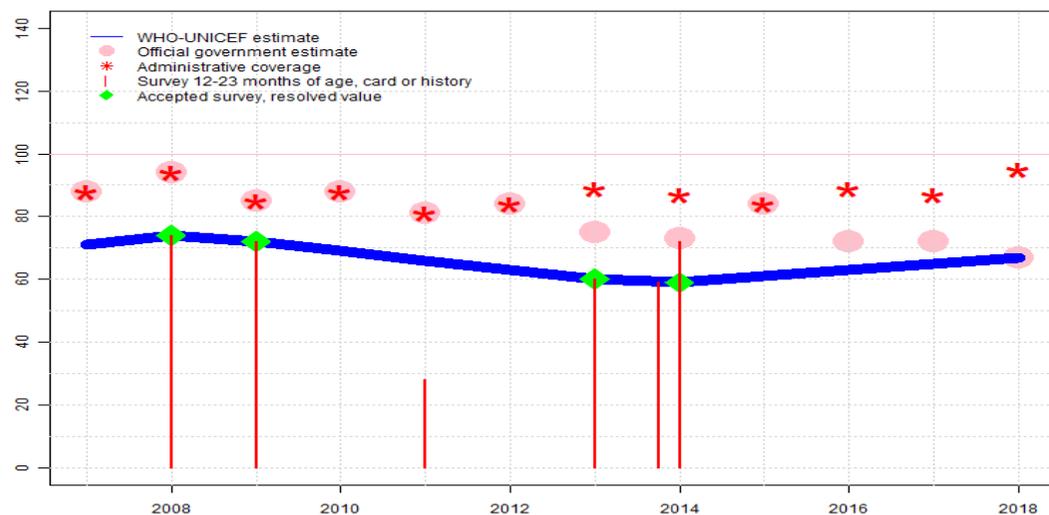

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

## Description:

- 2018: Estimate based on reported official coverage that is based on 2018 DHS Key Indicators Report. Please see below. Estimate challenged by: D-
- 2017: Reported data calibrated to 2014 and 2018 levels. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Preliminary results for the 2017 birth cohort from the 2018 DHS support reported official coverage. Estimate of 65 percent changed from previous revision value of 57 percent. Estimate challenged by: D-R-
- 2016: Reported data calibrated to 2014 and 2018 levels. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Official estimates based on January-February 2016 vaccination coverage survey for 2014 cohort, which has internal inconsistencies in the results. Estimate of 63 percent changed from previous revision value of 57 percent. Estimate challenged by: D-R-
- 2015: Reported data calibrated to 2014 and 2018 levels. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Estimate of 60 percent changed from previous revision value of 57 percent. Estimate challenged by: D-R-
- 2014: Survey evidence does not support reported data. Estimate based on survey results. Survey evidence of 57 percent based on 1 survey(s). Expanded Programme of Immunization External Review, 2016 results ignored by working group. Coverage by card is higher than cards seen and other inconsistencies such as coverage with final doses higher than earlier doses in the series. Also, EPI survey results inconsistent with MICS for the same cohort and previous surveys. Mali Multiple Indicator Cluster Survey 2015 card or history results of 48 percent modified for recall bias to 57 percent based on 1st dose card or history coverage of 65 percent, 1st dose card only coverage of 34 percent and 3rd dose card only coverage of 30 percent. Expanded Programme of Immunization External Review, 2016 card or history results of 73 percent modified for recall bias to 99 percent based on 1st dose card or history coverage of 91 percent, 1st dose card only coverage of 36 percent and 3rd dose card only coverage of 45 percent. Reported data excluded. Programme reports data quality issues affecting both coverage denominator and numerator. Estimate challenged by: D-R-
- 2013: Survey evidence does not support reported data. Estimate based on survey results. Survey evidence of 59 percent based on 1 survey(s). Mali Multiple Indicator Cluster Survey 2015 card or history results of 49 percent modified for recall bias to 59 percent based on 1st dose card or history coverage of 64 percent, 1st dose card only coverage of 25 percent and 3rd dose card only coverage of 23 percent. Estimate challenged by: D-R-
- 2012: Reported data calibrated to 2011 and 2013 levels. Reported data excluded due to an increase from 56 percent to 87 percent with decrease 76 percent. Estimate challenged by: D-R-
- 2011: Pneumococcal conjugate vaccine was introduced in 2011. GoC=R+ S+
