Countries in EAPR Region

- The East Asia and Pacific region includes the following 27 countries: Brunei Darussalam, Cambodia, China, Cook Islands, DPRK, Fiji, Indonesia, Kiribati, Laos, Malaysia, Marshall Islands, Micronesia, Mongolia, Myanmar, Nauru, Niue, PNG, Palau, Philippines, Samoa, Solomon Islands, Thailand, Timor-Leste, Tonga, Tuvalu, Vanuatu, and Viet Nam.

Overview

- While noting variations across countries and vaccines, 2 out of the 13 childhood vaccines achieved an average coverage of 90% or higher within the East Asia and Pacific region in 2025.
- Coverage of the first dose of diphtheria-tetanus-pertussis-containing vaccine (DTP1) was the same in 2025 as it was in 2024 (91%), and coverage of the third dose of DTP-containing vaccine (DTP3) increased from 88% in 2024 to 89% in 2025. Coverage of the first dose of the measles-containing vaccine (MCV1) was the same in 2025 as it was in 2024 (89%).
- A total of 21 out of 27 countries reached target coverage (90%) for all 13 antigens, representing 78% of the region.
- There were 6 countries that did not meet the target coverage across all antigens: Cambodia, Indonesia, Laos, Myanmar, PNG, and Philippines.
- In 2025, the number of zero-dose children (1.8 million) was approximately 97% higher than the annual number proposed to achieve the Immunization Agenda 2030 target of reducing the number of zero-dose children by half by 2030 in East Asia and Pacific region (909,000), based on a linear trajectory of decline.

Estimated number of zero-dose children, 2000–2025 and target by 2030, EAPR Region

Source: WHO/UNICEF estimates of national immunization coverage, 2025 revision.
 Note: The Immunization Agenda 2030 (IA2030) calls on all countries to reduce the number of zero-dose children in 2019 in half by 2030. Dark blue bars are the estimated number of zero-dose children in 2000–2025, light blue bar is the target number of zero-dose children by 2030. The line and points show the yearly progress and trajectory to meet the target by 2030, based on a linear decline.

DTP1: Reaching zero-dose children

- The number of children vaccinated with DTP1 decreased 29% from 24.6 million in 2019 to 17.5 million in 2025.
- DTP1 coverage in 2025 was 91%, lower than in 2019 (95%) and the same as in 2024.
- In 2025, the number of zero-dose children (1.8 million) was approximately 97% higher than the annual number proposed to achieve the Immunization Agenda 2030 target in EAPR region (909,000), based on a linear trajectory of decline.
- In 2025, Indonesia and Philippines represented approximately 37% and 21% of all zero-dose children in EAPR (n = 1.8 million), respectively. Indonesia had the highest number of zero-dose children at 657,000, and Philippines had the second highest at 381,000.
- In 2025, the lowest DTP1 coverage was observed in PNG at 49%, followed by Laos at 74%.
- There were 20 (74%) out of 27 countries in the region that achieved DTP1 coverage of 90% or higher in 2025.

DTP3: A marker of routine immunization service delivery to children

- The number of children vaccinated with DTP3 decreased 29.3% from 24.1 million in 2019 to 17.1 million in 2025.
- DTP3 coverage in 2025 was 89%, lower than in 2019 (93%) but higher than in 2024 (88%).
- In 2025, 2% of children who received DTP1 did not receive DTP3, which was the same as in 2019 (2%); low dropout rates imply good ability to provide a complete series of vaccines early in life.
- In 2025, DTP3 coverage ranged from 43% in PNG to 99% in Brunei Darussalam, DPRK, and Tuvalu.
- In 2025, Indonesia had DTP3 coverage of 82% and the highest absolute number of un- and undervaccinated children in the region (788,000), followed by Philippines with 71% coverage and 526,000 un- and undervaccinated children.

DTP3 coverage and un- or under-vaccinated children over time, EAPR, 2000-2025

Dotted line shows the IA2030 target of 90% coverage
 Source: WHO/UNICEF estimates of national immunization coverage, 2025 revision.

MCV: Canary in the coal mine

- MCV1 coverage in 2025 was 89%, lower than in 2019 (94%) and the same as in 2024.
- Coverage of the second dose of the measles-containing vaccine (MCV2) in 2025 was 85%, lower than in both 2019 (89%) and 2024 (87%). This leaves 2.2 million children without any protection and another 767,000 with only partial protection against the measles virus.
- In 2025, 2% of children who received DTP1 did not receive MCV1. This 2% dropout rate was 1 percentage point higher than in 2019 (1%) and higher than the 2024 dropout rate (1%).
- Low DTP-MCV dropout rates imply good retention and ability to provide a full course of vaccines in infancy.
- 6 countries (Laos, Myanmar, PNG, Solomon Islands, Timor-Leste, and Vanuatu) had MCV1 coverage below 80% for all of the last 3 years.
- In 2025, Indonesia had the highest number of children who did not receive the measles vaccine (657,000), representing approximately 30% of all children unprotected against measles in EAPR (2.2 million).

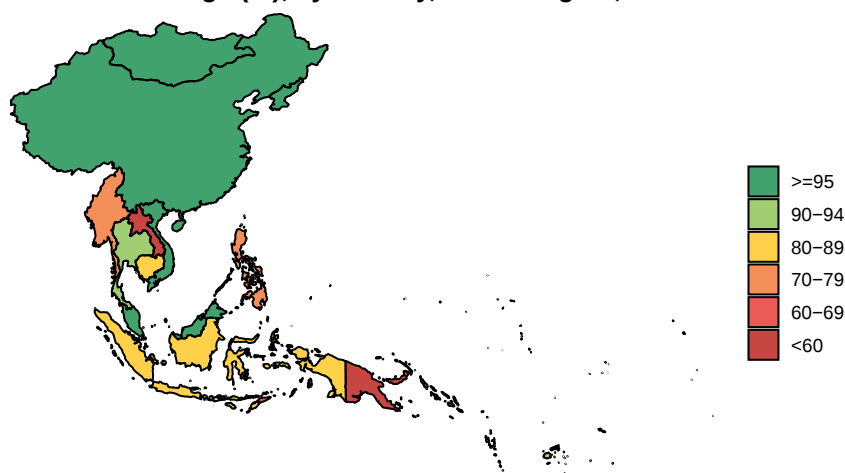

MCV1 coverage (%), by country, EAPR Region, 2000–2025

HPV

- Programme coverage of the first dose of HPV vaccine (HPV1) among girls stood at 25% in 2025, which was the same as the coverage in 2024.
- Coverage of the last dose (HPVc) stood at 20% in 2025, which was the same as the coverage in 2024.
- HPVc coverage remains well below the IA2030 target of 90%.
- In 2025, there were 10.5 million girls who did not receive any HPV vaccination.
- In EAPR, 24 out of 27 countries (89%) had introduced HPV vaccination by 2025.
 - WUENIC HPV coverage estimates are available for 23 of these countries in 2025.
 - The country that has introduced HPV vaccination but does not yet have WUENIC coverage data available for 2025 is China.
- The 3 countries that had not introduced HPV vaccination are DPRK, PNG, and Viet Nam.

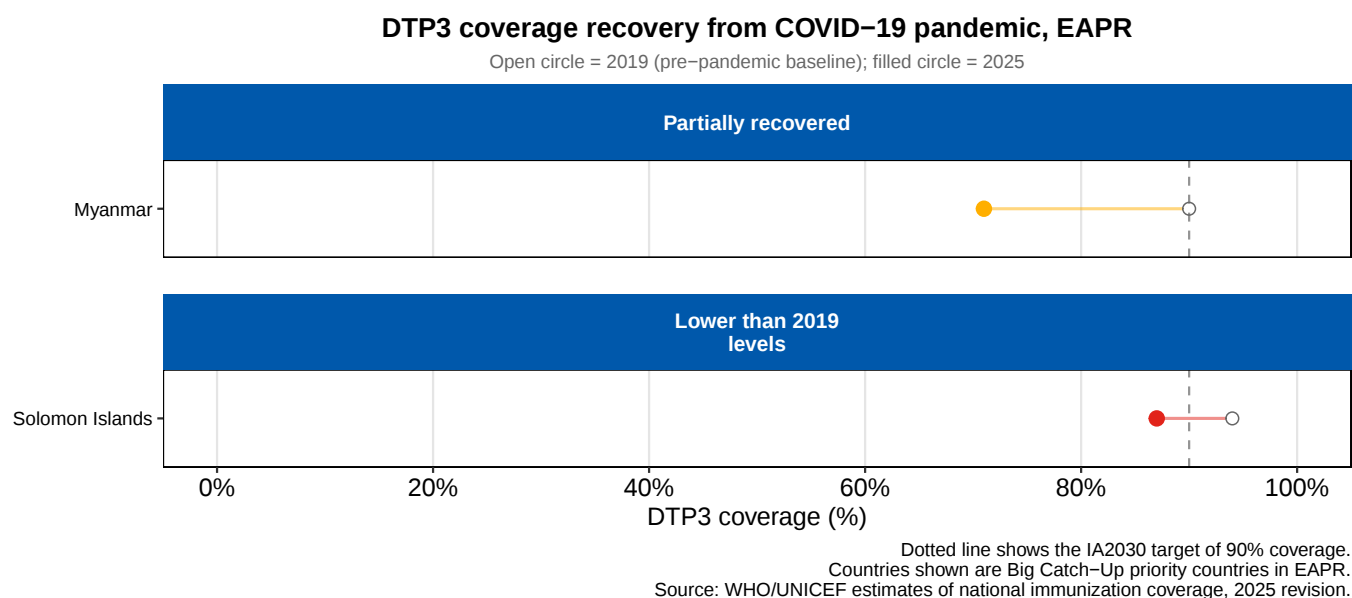

HPV1 and HPVc coverage and unvaccinated females over time, EAPR, 2010–2025

Dotted line shows the IA2030 target of 90% coverage

Priority countries supported to recover from the COVID-19 pandemic

- Of the 35 countries that were globally supported for the Big Catch-up, 2 are in EAPR.
 - Myanmar is on the path to recovery to 2019 DTP3 levels.
 - Solomon Islands has not yet recovered, with stagnation or decline from 2019 DTP3 levels.

Recovery Methodology

This analysis tracks DTP3 coverage trends from 2019 to 2025 to assess post-pandemic recovery. Countries are categorized based on their progress toward 2019 baseline levels:

- **Recovered or strengthened:** 2025 coverage is equal to or higher than 2019 levels.
- **Partially recovered:** Coverage in 2025 is still below 2019 levels but has improved by at least 3 percentage points from its lowest point in 2020 or 2021.
- **Lower than 2019 levels:** Coverage in 2025 remains below 2019 levels and has shown less than 3 percentage points of improvement from its lowest point in 2020 or 2021.

Appendix

WHO/UNICEF Estimates of National Immunization Coverage (WUENIC)

Each year, WHO and UNICEF review national immunization data from Member States, including administrative and official coverage, survey estimates and contextual information, and use rules-based data triangulation approach to assess coverage. Estimates are produced independently, without borrowing data from other countries, and are not based on ad hoc adjustments. In some cases, they rely on a single source, typically nationally reported coverage. When data for a specific country-vaccine-year are unavailable, values from adjacent years are interpolated or extrapolated, and conflicting sources are assessed to determine the most reliable estimate, considering potential biases and expert opinion.

Methods:

- [Burton et al. 2009. WHO and UNICEF estimates of national infant immunization coverage: methods and processes](#)
- [Burton et al. 2012. A formal representation of the WHO and UNICEF estimates of national immunization coverage: a computational logic approach](#)
- [Brown et al. 2013. An introduction to the grade of confidence used to characterize uncertainty around the WHO and UNICEF estimates of national immunization coverage](#)

These talking points present the latest WUENIC estimates (published 15 July 2026).

Definitions of immunization terms:

- Bacillus Calmette-Guerin (BCG): vaccine against tuberculosis
- Hepatitis B birth dose, given within 24 hours after birth (HepBB)
- Diphtheria, tetanus, and pertussis vaccine, first dose (DTP1) and third dose (DTP3)
- Hepatitis B vaccine, third dose (HepB3)
- Haemophilus influenzae type B vaccine, third dose (Hib3)
- Inactivated polio vaccine, first dose (IPV1) and last dose (IPVC)
- Measles containing vaccine, first dose (MCV1) and second dose (MCV2)
- Rotavirus vaccine, last dose (RotaC)
- Pneumococcal vaccine, last dose (PCV)
- Yellow Fever vaccine (YFV)
- Meningococcal A vaccine (MengA)
- Human Papillomavirus vaccine, first dose (HPV1) and last dose (HPVc)
