Countries in Non-programme Region

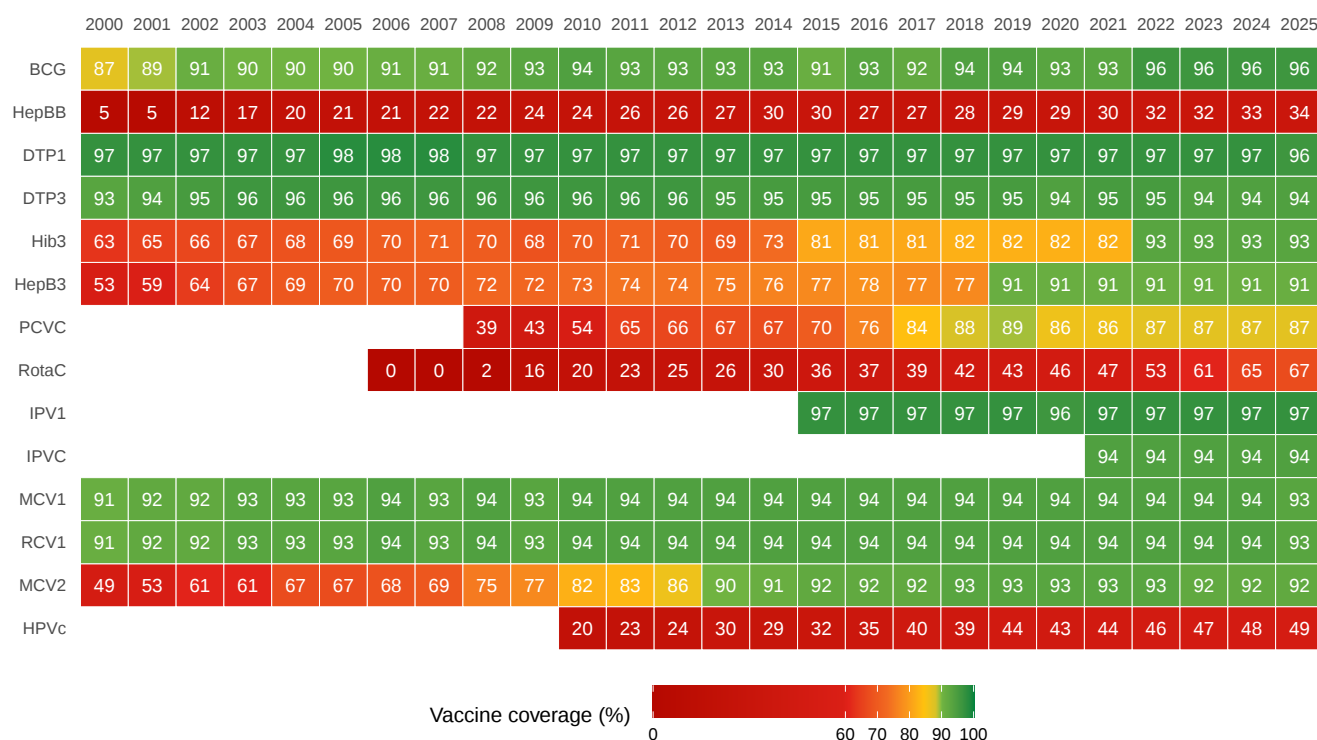

- The Non-programme region includes the following 41 countries: Andorra, Australia, Austria, Belgium, Canada, Cyprus, Czechia, Denmark, Estonia, Finland, France, Germany, Hungary, Iceland, Ireland, Israel, Italy, Japan, Latvia, Lithuania, Luxembourg, Malta, Mauritius, Monaco, Netherlands (Kingdom of the), New Zealand, Norway, Poland, Portugal, Republic of Korea, Russian Federation, San Marino, Seychelles, Singapore, Slovakia, Slovenia, Spain, Sweden, Switzerland, United Kingdom, and United States.

Overview

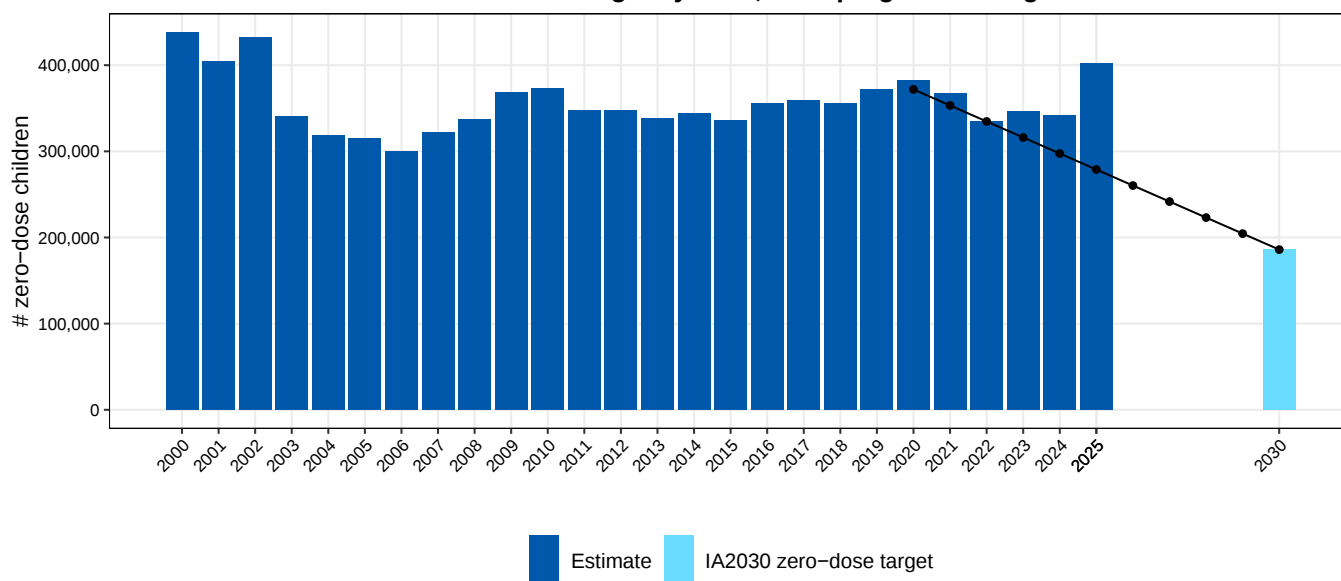

- While noting variations across countries and vaccines, 10 out of the 13 childhood vaccines achieved an average coverage of 90% or higher within the Non-programme region in 2025.
- Coverage of the first dose of diphtheria-tetanus-pertussis-containing vaccine (DTP1) declined from 97% in 2024 to 96% in 2025, and coverage of the third dose of DTP-containing vaccine (DTP3) was the same in 2025 as it was in 2024 (94%). Coverage of the first dose of the measles-containing vaccine (MCV1) declined from 94% in 2024 to 93% in 2025.
- A total of 39 out of 41 countries reached target coverage (90%) for all 13 antigens, representing 95% of the region.
- There were 2 countries that did not meet the target coverage across all antigens: Estonia and San Marino.
- In 2025, the number of zero-dose children (402,000) was approximately 44% higher than the annual number proposed to achieve the Immunization Agenda 2030 target of reducing the number of zero-dose children by half by 2030 in Non-programme region (279,000), based on a linear trajectory of decline.

Vaccine coverage (%), Non-programme Region, 2000–2025

Estimated number of zero-dose children, 2000–2025 and target by 2030, Non-programme Region

Source: WHO/UNICEF estimates of national immunization coverage, 2025 revision.
 Note: The Immunization Agenda 2030 (IA2030) calls on all countries to reduce the number of zero-dose children in 2019 in half by 2030. Dark blue bars are the estimated number of zero-dose children in 2000–2025, light blue bar is the target number of zero-dose children by 2030. The line and points show the yearly progress and trajectory to meet the target by 2030, based on a linear decline.

DTP1: Reaching zero-dose children

- The number of children vaccinated with DTP1 decreased 8.7% from 11.6 million in 2019 to 10.6 million in 2025.
- DTP1 coverage in 2025 was 96%, lower than in both 2019 (97%) and 2024 (97%).
- In 2025, the number of zero-dose children (402,000) was approximately 44% higher than the annual number proposed to achieve the Immunization Agenda 2030 target in Non-programme region (279,000), based on a linear trajectory of decline.
- In 2025, United States and Japan represented approximately 18% and 17% of all zero-dose children in Non-programme (n = 402,000), respectively. United States had the highest number of zero-dose children at 73,000, and Japan had the second highest at 67,000.
- In 2025, the lowest DTP1 coverage was observed in Estonia at 86%, followed by San Marino at 89%.
- There were 39 (95%) out of 41 countries in the region that achieved DTP1 coverage of 90% or higher in 2025.

DTP3: A marker of routine immunization service delivery to children

- The number of children vaccinated with DTP3 decreased 9.1% from 11.4 million in 2019 to 10.3 million in 2025.
- DTP3 coverage in 2025 was 94%, lower than in 2019 (95%) and the same as in 2024.
- In 2025, 3% of children who received DTP1 did not receive DTP3, which was 1 percentage point higher than in 2019 (2%); low dropout rates imply good ability to provide a complete series of vaccines early in life.
- In 2025, DTP3 coverage ranged from 85% in Estonia to 99% in Hungary, Latvia, Luxembourg, Malta, Monaco, and Portugal.
- In 2025, United States had DTP3 coverage of 94% and the highest absolute number of un- and undervaccinated children in the region (219,000), followed by Germany with 89% coverage and 78,000 un- and undervaccinated children.

MCV: Canary in the coal mine

- MCV1 coverage in 2025 was 93%, the same as in 2019 and 2024.
- Coverage of the second dose of the measles-containing vaccine (MCV2) in 2025 was 92%, lower than in 2019 (93%) and the same as in 2024. This leaves 733,000 children without any protection and another 260,000 with only partial protection against the measles virus.
- In 2025, 3% of children who received DTP1 did not receive MCV1. This 3% dropout rate was the same as in 2019 (3%) and the same as the 2024 dropout rate (3%).
- Low DTP-MCV dropout rates imply good retention and ability to provide a full course of vaccines in infancy.
- Over the last 3 years, no countries have had MCV1 coverage below 80%.
- In 2025, United States had the highest number of children who did not receive the measles vaccine (292,000), representing approximately 40% of all children unprotected against measles in Non-programme (733,000).

HPV

- Programme coverage of the first dose of HPV vaccine (HPV1) among girls stood at 61% in 2025, which was higher than the coverage of 60% in 2024.
- Coverage of the last dose (HPVc) stood at 49% in 2025, which was higher than the coverage of 48% in 2024.
- HPVc coverage remains well below the IA2030 target of 90%, though it is trending upward.
- In 2025, there were 2.7 million girls who did not receive any HPV vaccination.
- In Non-programme, 40 out of 41 countries (98%) had introduced HPV vaccination by 2025.
 - WUENIC HPV coverage estimates are available for all 40 of these countries in 2025.
- The country that had not introduced HPV vaccination is Russian Federation.

Appendix

WHO/UNICEF Estimates of National Immunization Coverage (WUENIC)

Each year, WHO and UNICEF review national immunization data from Member States, including administrative and official coverage, survey estimates and contextual information, and use rules-based data triangulation approach to assess coverage. Estimates are produced independently, without borrowing data from other countries, and are not based on ad hoc adjustments. In some cases, they rely on a single source, typically nationally reported coverage. When data for a specific country-vaccine-year are unavailable, values from adjacent years are interpolated or extrapolated, and conflicting sources are assessed to determine the most reliable estimate, considering potential biases and expert opinion.

Methods:

- [Burton et al. 2009. WHO and UNICEF estimates of national infant immunization coverage: methods and processes](#)
- [Burton et al. 2012. A formal representation of the WHO and UNICEF estimates of national immunization coverage: a computational logic approach](#)
- [Brown et al. 2013. An introduction to the grade of confidence used to characterize uncertainty around the WHO and UNICEF estimates of national immunization coverage](#)

These talking points present the latest WUENIC estimates (published 15 July 2026).

Definitions of immunization terms:

- Bacillus Calmette-Guerin (BCG): vaccine against tuberculosis
- Hepatitis B birth dose, given within 24 hours after birth (HepBB)
- Diphtheria, tetanus, and pertussis vaccine, first dose (DTP1) and third dose (DTP3)
- Hepatitis B vaccine, third dose (HepB3)
- Haemophilus influenzae type B vaccine, third dose (Hib3)
- Inactivated polio vaccine, first dose (IPV1) and last dose (IPVC)
- Measles containing vaccine, first dose (MCV1) and second dose (MCV2)
- Rotavirus vaccine, last dose (RotaC)
- Pneumococcal vaccine, last dose (PCV)
- Yellow Fever vaccine (YFV)
- Meningococcal A vaccine (MengA)
- Human Papillomavirus vaccine, first dose (HPV1) and last dose (HPVc)
