World Health Organization

Administrative Data Quality Review

This report presents a systematic review of immunization administrative data quality. It is designed to support country-level data review discussions. Administrative ("admin") data can be affected by reporting errors, denominator inconsistencies, and supply disruptions. This report helps identify where data quality issues may exist and why admin coverage may diverge from the WHO/UNICEF Estimates of National Immunization Coverage (WUENIC), survey, and official government estimates.

This report covers the following data quality components:

Schedule & Supply Context

Vaccine schedule, introduction years, and recorded stockouts

Coverage Overview

WUENIC, admin, official government, and survey coverage across all vaccines and years.

Admin Coverage Flags

Years where admin coverage exceeds 100% or changes by more than ± 10 percentage points.

Admin vs. Estimates

Gaps between admin and WUENIC estimates; gaps between admin and official government estimates.

Numerator Checks

Percent change from the previous year in the number of children vaccinated; co-administration consistency checks.

Denominator Checks

Percent change from the previous year in target population size; live births vs. surviving infants over time.

Admin Data Availability Heatmap

Heatmap showing which vaccines have missing or present administrative data by year.

Admin Data Comments

Country-reported explanations for numerator accuracy, denominator source, and denominator accuracy.

Flags in this report indicate areas that warrant further review — they do not necessarily indicate errors. Country context, schedule changes, and reporting system updates should be considered alongside these findings.

The electronic Joint Reporting Form (eJRF)

Since 1998, in an effort to strengthen collaboration and minimize the reporting burden of countries, WHO and UNICEF have jointly collected immunization system and related information through a standard questionnaire (the Joint Reporting Form) sent to all Member States. In 2021, the form was updated to a cloud-based solution known as the electronic Joint Reporting Form (eJRF).

The eJRF serves three core functions:

Mission-Critical Data	Strategic Utility	Comprehensive Scope
Serves as the primary data source for tracking the **Immunization Agenda 2030 (IA2030)** and the Sustainable Development Goals (SDGs).	Informs WUENIC estimates, guides global funding decisions, and populates the UNICEF *State of the World's Children* reports.	Captures national and subnational coverage, vaccination schedules, vaccine stockouts, and disease trends.

All data in this presentation is sourced from the eJRF.

Definitions of immunization terms

Vaccine coverage
Percentage of infants (children under one year of age) who received certain vaccine-doses. For example, coverage of DTP3 is the percentage of infants who received all three doses of diphtheria, tetanus, and pertussis (DTP) vaccine.

Unvaccinated
An infant that did not receive the first dose of a vaccine series. The term zero-dose is used to describe children unvaccinated with DTP1.

Under-vaccinated
An infant who received some but not all the recommended vaccine-doses in the national schedule.

Vaccine-Doses
- Bacillus Calmette-Guerin (BCG): vaccine against tuberculosis
- Hepatitis B birth dose, given within 24 hours after birth (HepBB)
- Diphtheria, tetanus, and pertussis vaccine, first dose (DTP1) and third dose (DTP3)
- Hepatitis B vaccine, third dose (HepB3)
- Haemophilus influenzae type b vaccine, third dose (Hib3)
- Inactivated polio vaccine, first dose (IPV1) and last dose (IPVC)
- Measles containing vaccine, first dose (MCV1) and second dose (MCV2)
- Rotavirus vaccine, last dose (RotaC)
- Pneumococcal vaccine, last dose (PCVC)
- Yellow Fever vaccine (YFV)
- Meningococcal A vaccine (MengA)
- Human papillomavirus vaccine, first dose (HPV1) and last dose (HPVc): vaccine to protect against certain types of human papillomavirus that can lead to cancer or genital warts

The Immunization Agenda 2030 (IA2030)
The IA2030 is a global strategy endorsed by the World Health Assembly aiming to ensure everyone, everywhere, at every age benefits from vaccines for improved health and well-being by 2030. It focuses on increasing vaccine coverage, equity, sustainability and pandemic preparedness while promoting life-course immunization and integrating immunization with other health services.

Data Sources Presented

This report presents data from the following sources:

WUENIC	Administrative ("Admin")	Official	Survey
WHO/UNICEF Estimates of National Immunization Coverage (WUENIC) provides annual country-level immunization coverage estimates produced jointly by WHO and UNICEF. These estimates are derived from a systematic review of all available data sources and are adjusted to account for data quality issues.	Reported by national authorities and based on aggregated administrative reports from health service providers on the number of vaccinations administered during a given period (numerator) and reported target population data (denominator).	Estimated coverage reported by national authorities that reflects their assessment of the most likely coverage based on any combination of administrative coverage, survey-based estimates, or other data sources or adjustments.	Based on estimated coverage from population-based household surveys among children aged 12–23 months or 24–35 months. Survey results are considered for the appropriate birth cohort based on the period of data collection. Coverage information is based on the combination of vaccination history from documented evidence or caregiver recall.

Vaccine Schedule

		Dose number and age administered			
Level	**Vaccine**	**1**	**2**	**3**	**4**
National	DTP	3 months	5 months	11 to 18 months	
National	HEPB (pediatric)	5 years	7 years		
National	HPV (females and males)	11 years	+ 6 months		
National	MCV	11 to 18 months	5 years		
National	PCV	3 months	5 months	6 months	11 to 18 months

This table shows the 2025 national immunization schedule for routine services in Slovenia, reported through the WUENIC Joint Reporting Form on Immunization (JRF).

Each row corresponds to a vaccine or combination vaccine, indicating whether it is delivered at the national or subnational level. The schedule outlines the number of doses and the recommended ages for administration. Only childhood and adolescent vaccines relevant to WUENIC are included.

unicef World Health Organization

WUENIC 2025 revision

Vaccine Stockouts

Vaccines / supplies	2022
HepB	National (1m)

Years in which a national or subnational vaccine stockout was recorded.

This table provides context for interpreting the numerator and denominator trends and flags in the following slides, as stockouts may contribute to reduced service delivery and legitimate drops in coverage that may be misinterpreted as data quality issues.

Vaccine Introductions

Vaccine	National introduction	Partial introduction	Risk groups
HPV (Human papillomavirus) vaccine	2009		
HepB birth dose	Not introduced		2014
Hepatitis B vaccine	1998		
Hib (Haemophilus influenzae type B) vaccine	2000	1994	
IPV (Inactivated polio vaccine)	2004		
IPV (Inactivated polio vaccine) 2nd dose	2004		
Malaria vaccine	Not introduced		
Measles-containing vaccine 2nd dose	1991		
Meningococcal meningitis vaccines (any strain)	Not introduced		2005
Mumps vaccine	1995		
PCV (Pneumococcal conjugate vaccine)	2015		2005
RSV (Respiratory syncytial virus) immunization strategy	2024		
Rotavirus vaccine	Not introduced		
Rubella vaccine	1991		
Typhoid conjugate vaccine	Not introduced		
YF (Yellow fever) vaccine	Not introduced		

Year in which each vaccine was introduced nationally, partially, for risk groups, or risk areas.

We present the vaccination introductions table here to contextualize the data availability heatmap on the following slide.

unicef World Health Organization

Admin Data Availability Heatmap by Vaccine, Slovenia, 2010–2025

Heatmap showing whether admin data are present (green), missing (red), or not applicable because the vaccine had not yet been introduced or reporting had not started (white), by vaccine and year.

WUENIC 2025 revision

Admin Data Comments Summary: 2025

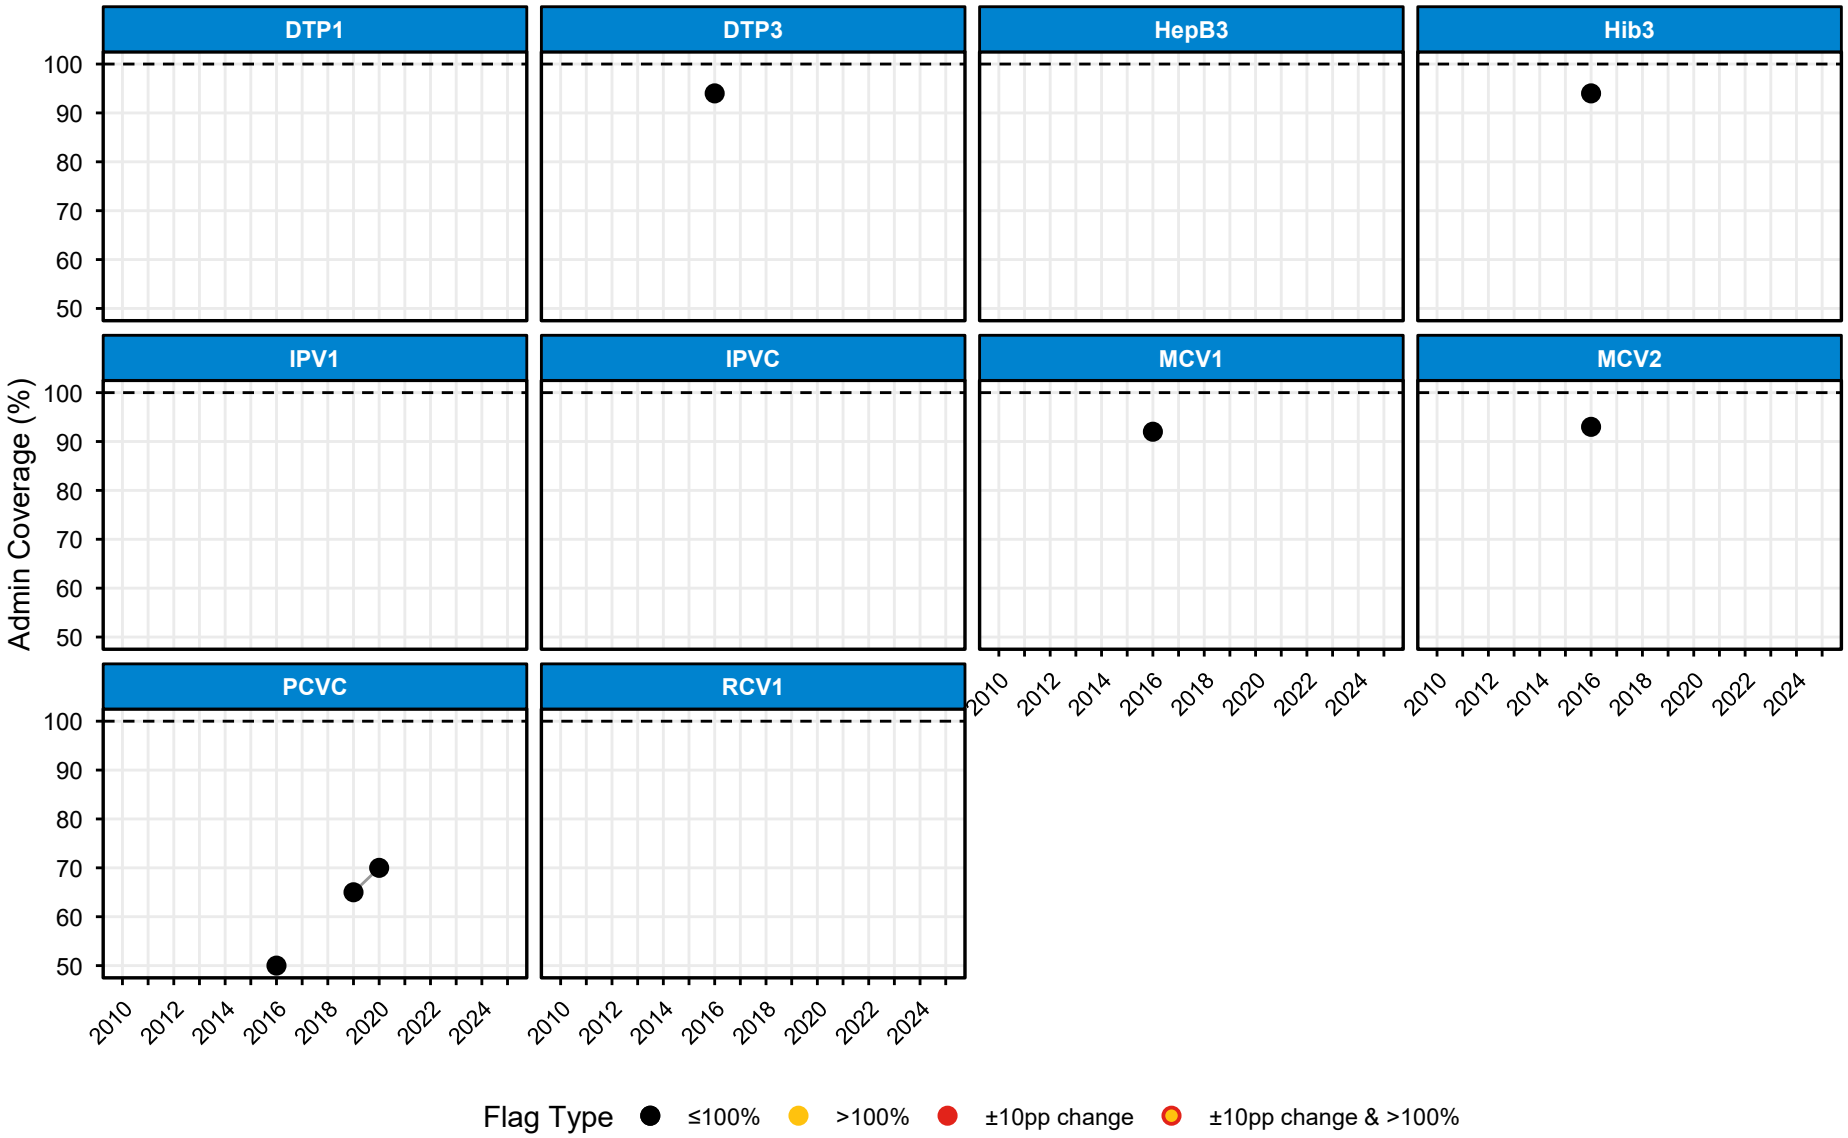

Comment Type	Comment
Denominator Accuracy	These vaccines are administered during a specific school year, when children attend a systematic health check-up, so the ideal denominator would be the number of children in the relevant school grade. However, as data on the exact number of children by grade are not available, birth cohorts are used as an approximation. This approach does not account for children who enter school later than usual, which may slightly underestimate the calculated vaccination coverage.
Denominator Source	Data on the number of children by birth cohort are obtained from the Statistical Office of the Republic of Slovenia (SURS).
Numerator Accuracy	Vaccination coverage data among schoolchildren are based on mandatory reports submitted by healthcare providers (school doctors) to the Immunization Information System (eRCO). Although providers are required to report all vaccinations administered, not all healthcare practitioners consistently report vaccinations to eRCO.

Summary of all admin data comment fields for the most recent year with available data (2025).

Admin Coverage Flags

Admin Coverage Flags by Vaccine and Year, Slovenia, 2010–2025

Orange = coverage > 100% | Red = ± 10pp

Flag Type ● ≤100% ● >100% ● ±10pp change ● ±10pp change & >100%

Gaps in line indicate missing admin data for that year.

Admin coverage flagged where values exceed 100% (orange) or change by more than ±10 percentage points from the previous year (red), 2010–2025.

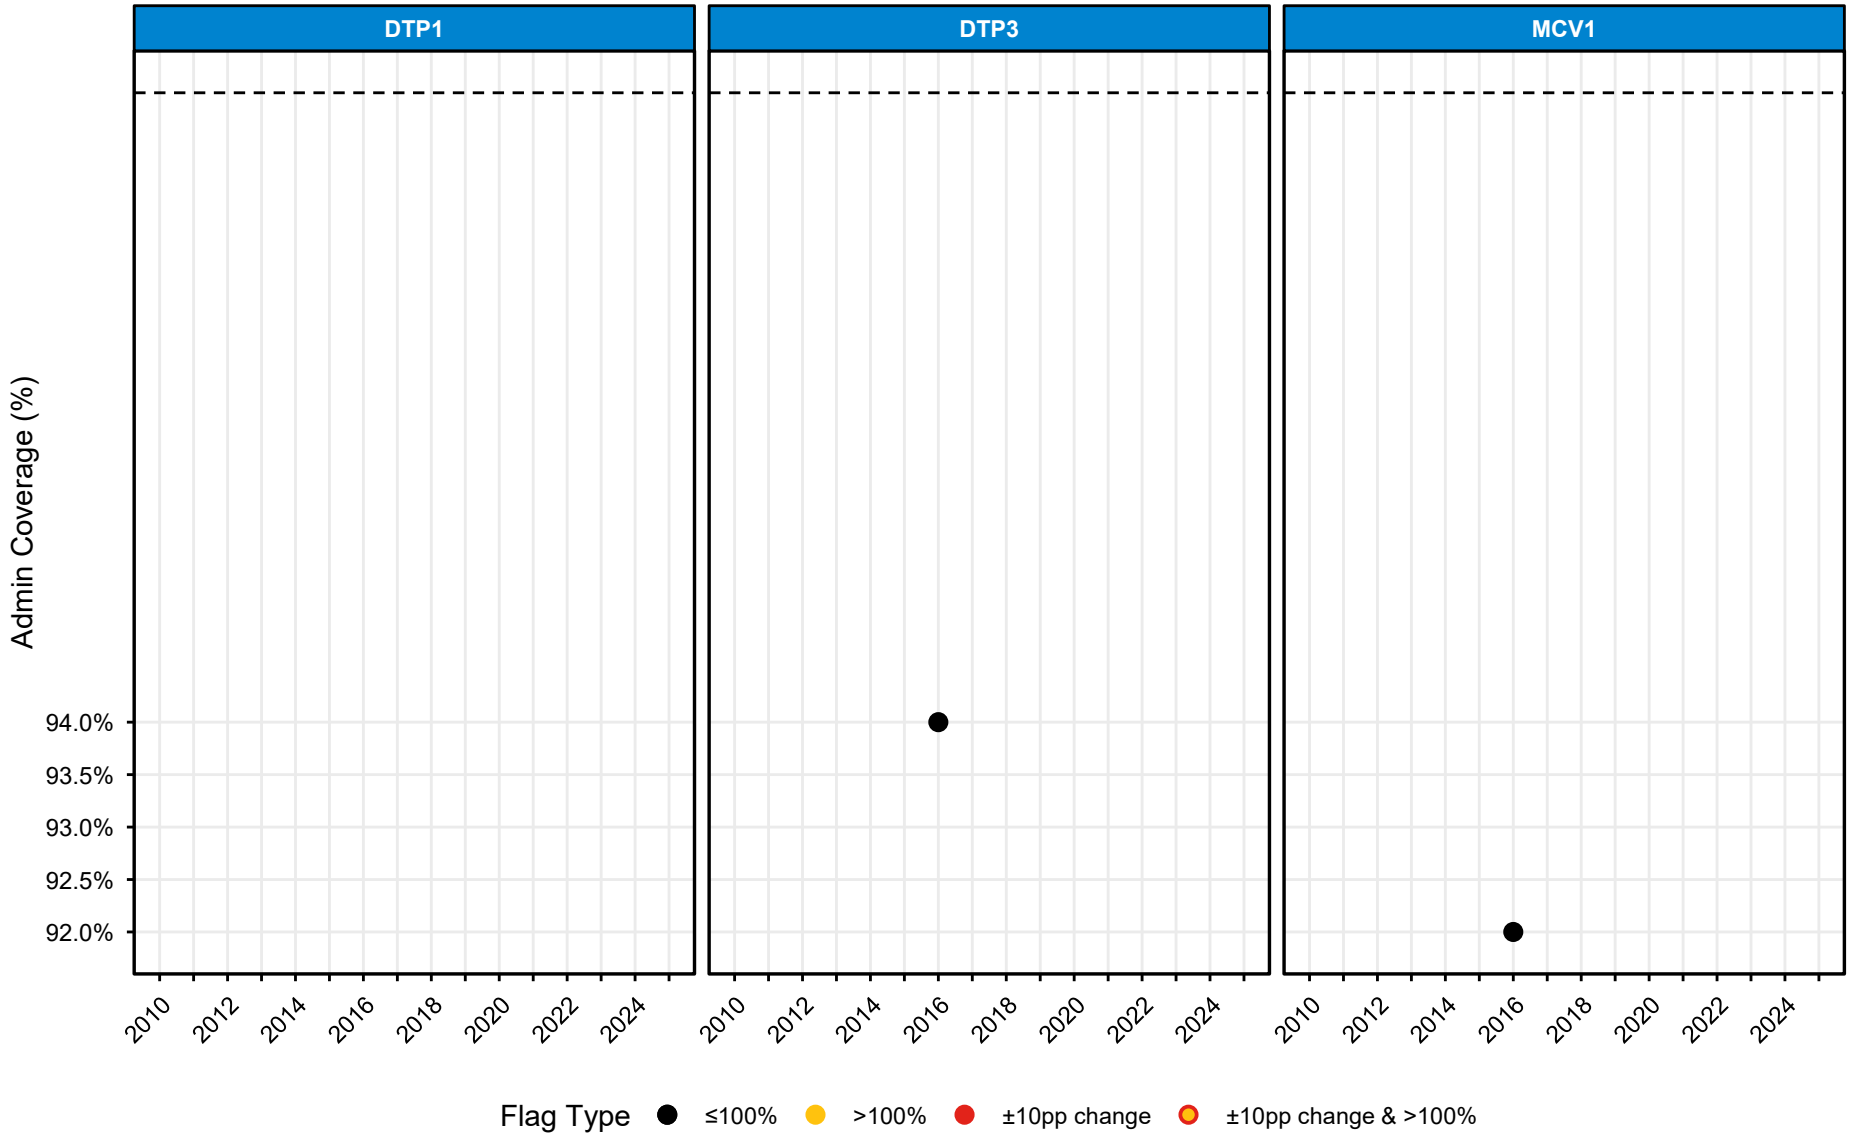

Two types of data quality issues are highlighted: coverage values above 100%, which suggest errors in the reported number of vaccinations or the denominator used, and year-on-year changes greater than 10 percentage points, which may reflect inconsistent reporting rather than true changes in vaccination coverage.

unicef World Health Organization

WUENIC 2025 revision

DTP1, DTP3, and MCV1 Admin Coverage Flags by Year, Slovenia, 2010–2025

Orange = coverage > 100% | Red = ± 10pp

Gaps in line indicate missing admin data for that year.

Same flag logic applied to DTP1, DTP3, and MCV1 only, 2010–2025.

Two types of data quality issues are highlighted: coverage values above 100%, which suggest errors in the reported number of vaccinations or the denominator used, and year-on-year changes greater than 10 percentage points, which may reflect inconsistent reporting rather than true changes in vaccination coverage.

Numerator Checks

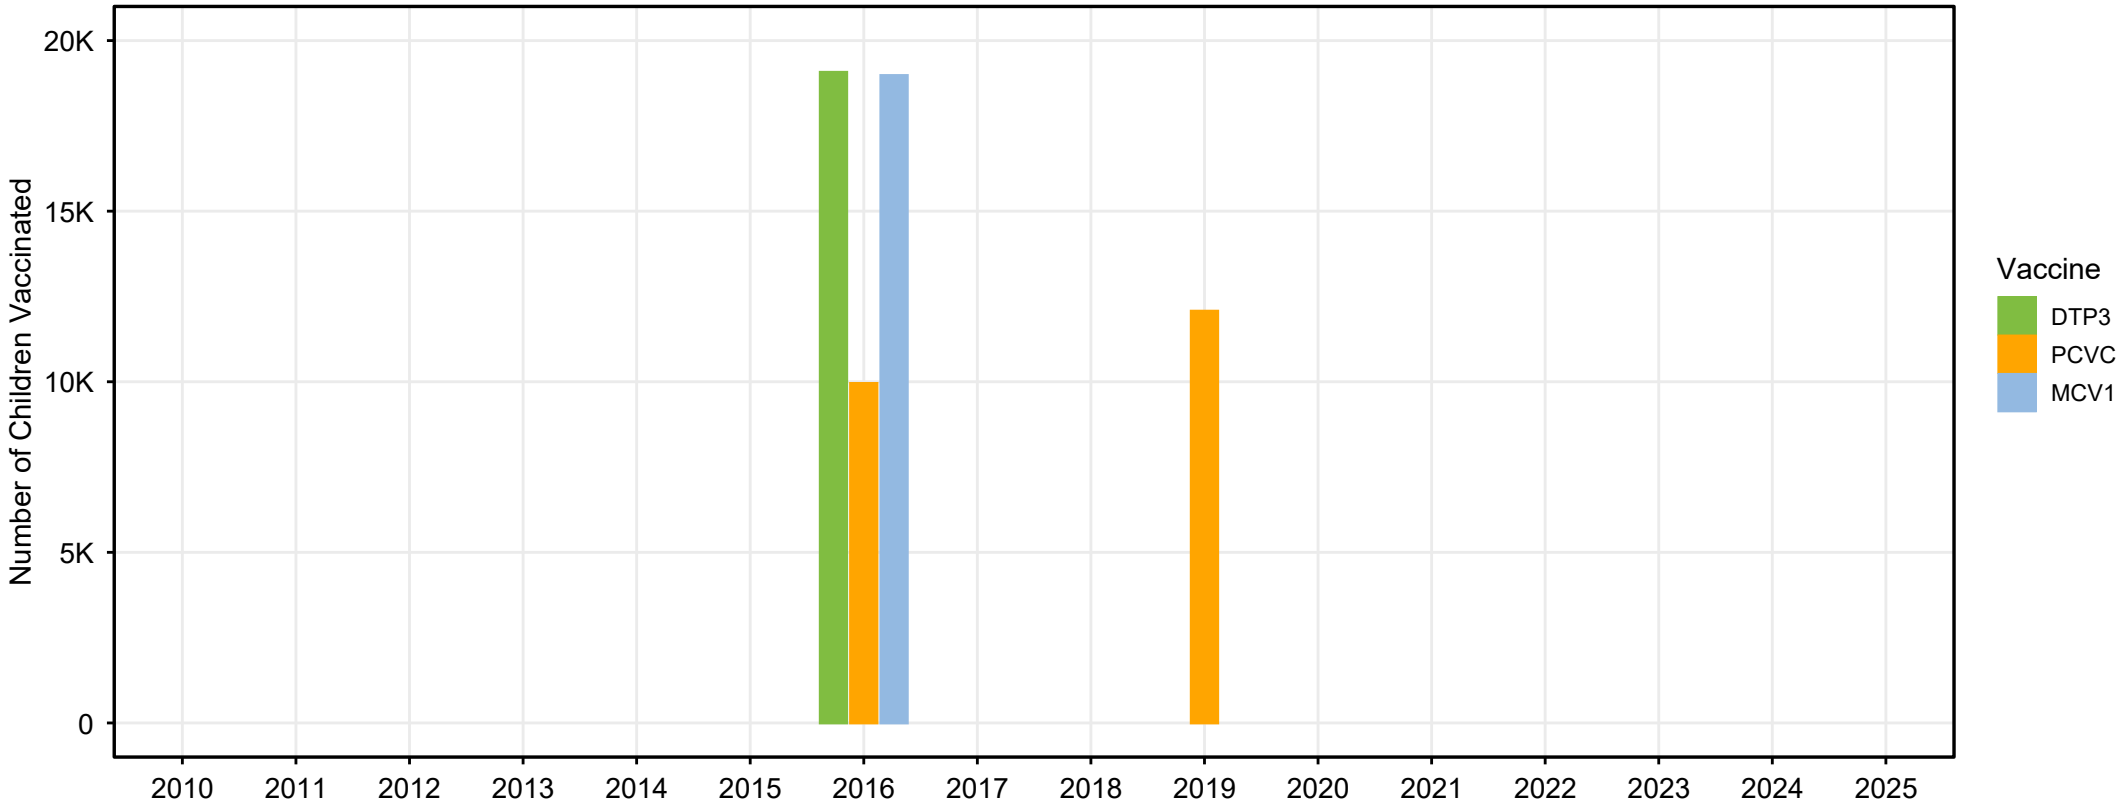

Admin Data Comments:
Numerator Accuracy (2021–2025)

Year	Comment
2025	Vaccination coverage data among schoolchildren are based on mandatory reports submitted by healthcare providers (school doctors) to the Immunization Information System (eRCO). Although providers are required to report all vaccinations administered, not all healthcare practitioners consistently report vaccinations to eRCO.
2024	Data on vaccination coverage among school children are obtained from mandatory reports from health care providers (school doctors) to the Immunization Information System – eRCO. They are obliged to report data on all vaccinations they have carried out. Not all healthcare practitioners report vaccinations into our immunization information system - eRCO.
2023	No comment provided
2022	No comment provided
2021	No comment provided

Factors limiting the accuracy of the numerator as reported by Slovenia.

Number of Children Vaccinated by Vaccine and Year, Slovenia, 2010–2025

WUENIC vaccines administered at 11 to 18 months of age

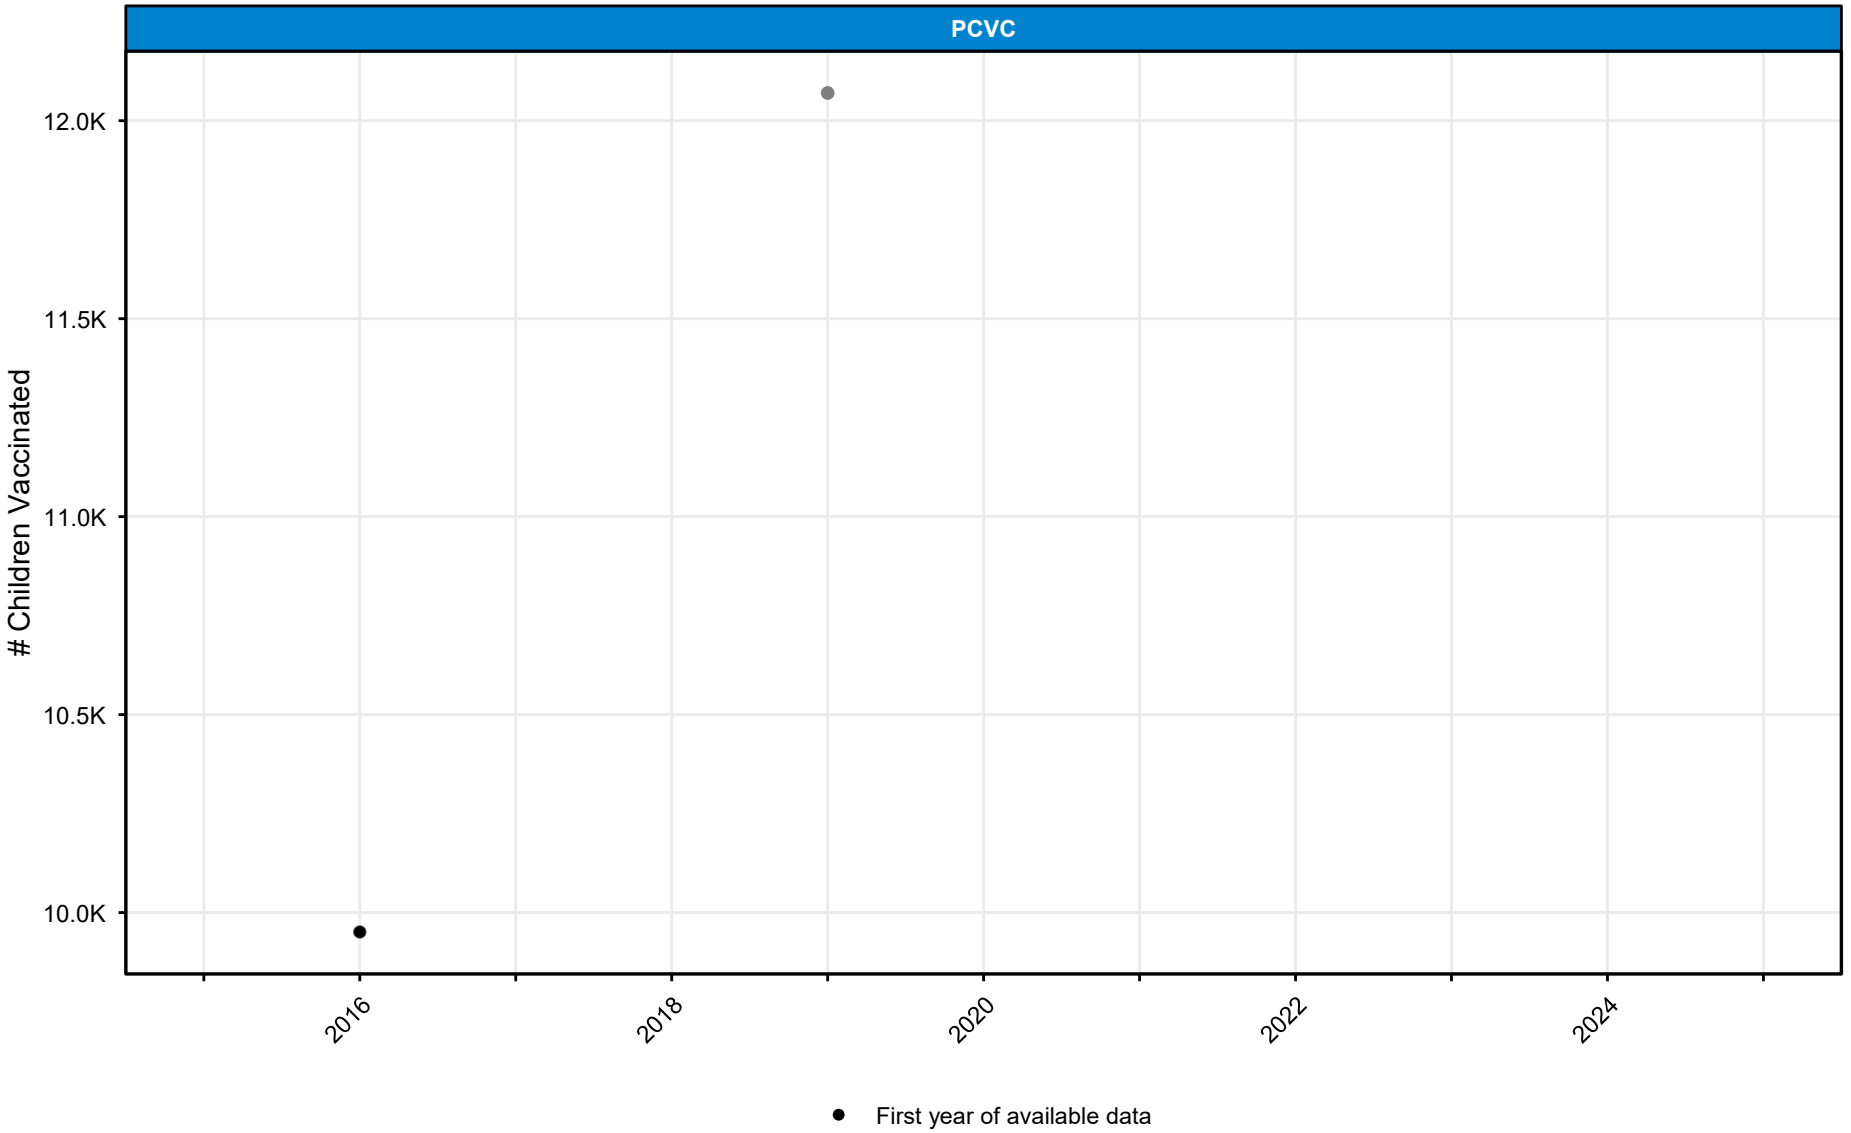

Number of children vaccinated with vaccines co-administered at the 11 to 18 months visit per the national schedule.

unicef

World Health Organization

Number of Children Vaccinated by Vaccine and Year, Slovenia, 2015–2025

NOTE: No numerator data: DTP1, DTP3, HepB3, Hib3, IPV1, IPVC, MCV1, MCV2, RCV1
Numerator data exists but no consecutive years to calculate percent change: PCVC

Raw counts of children vaccinated (numerator) by vaccine and year. Points are colored by the percent change from previous year in the number of children vaccinated.

Green point = stable year-to-year count of children vaccinated.

Orange/red point = high fluctuation in number of children vaccinated, which may indicate data quality issues.

Black point = first year of available numerator data for that vaccine.

Denominator Checks

Admin Data Comments: Denominator Source (2021–2025)

Year	Comment
2025	Data on the number of children by birth cohort are obtained from the Statistical Office of the Republic of Slovenia (SURS).
2024	Data on the number of children by birth cohort is obtained from the Statistical Office of the Republic of Slovenia (SURS).
2023	No comment provided
2022	No comment provided
2021	No comment provided

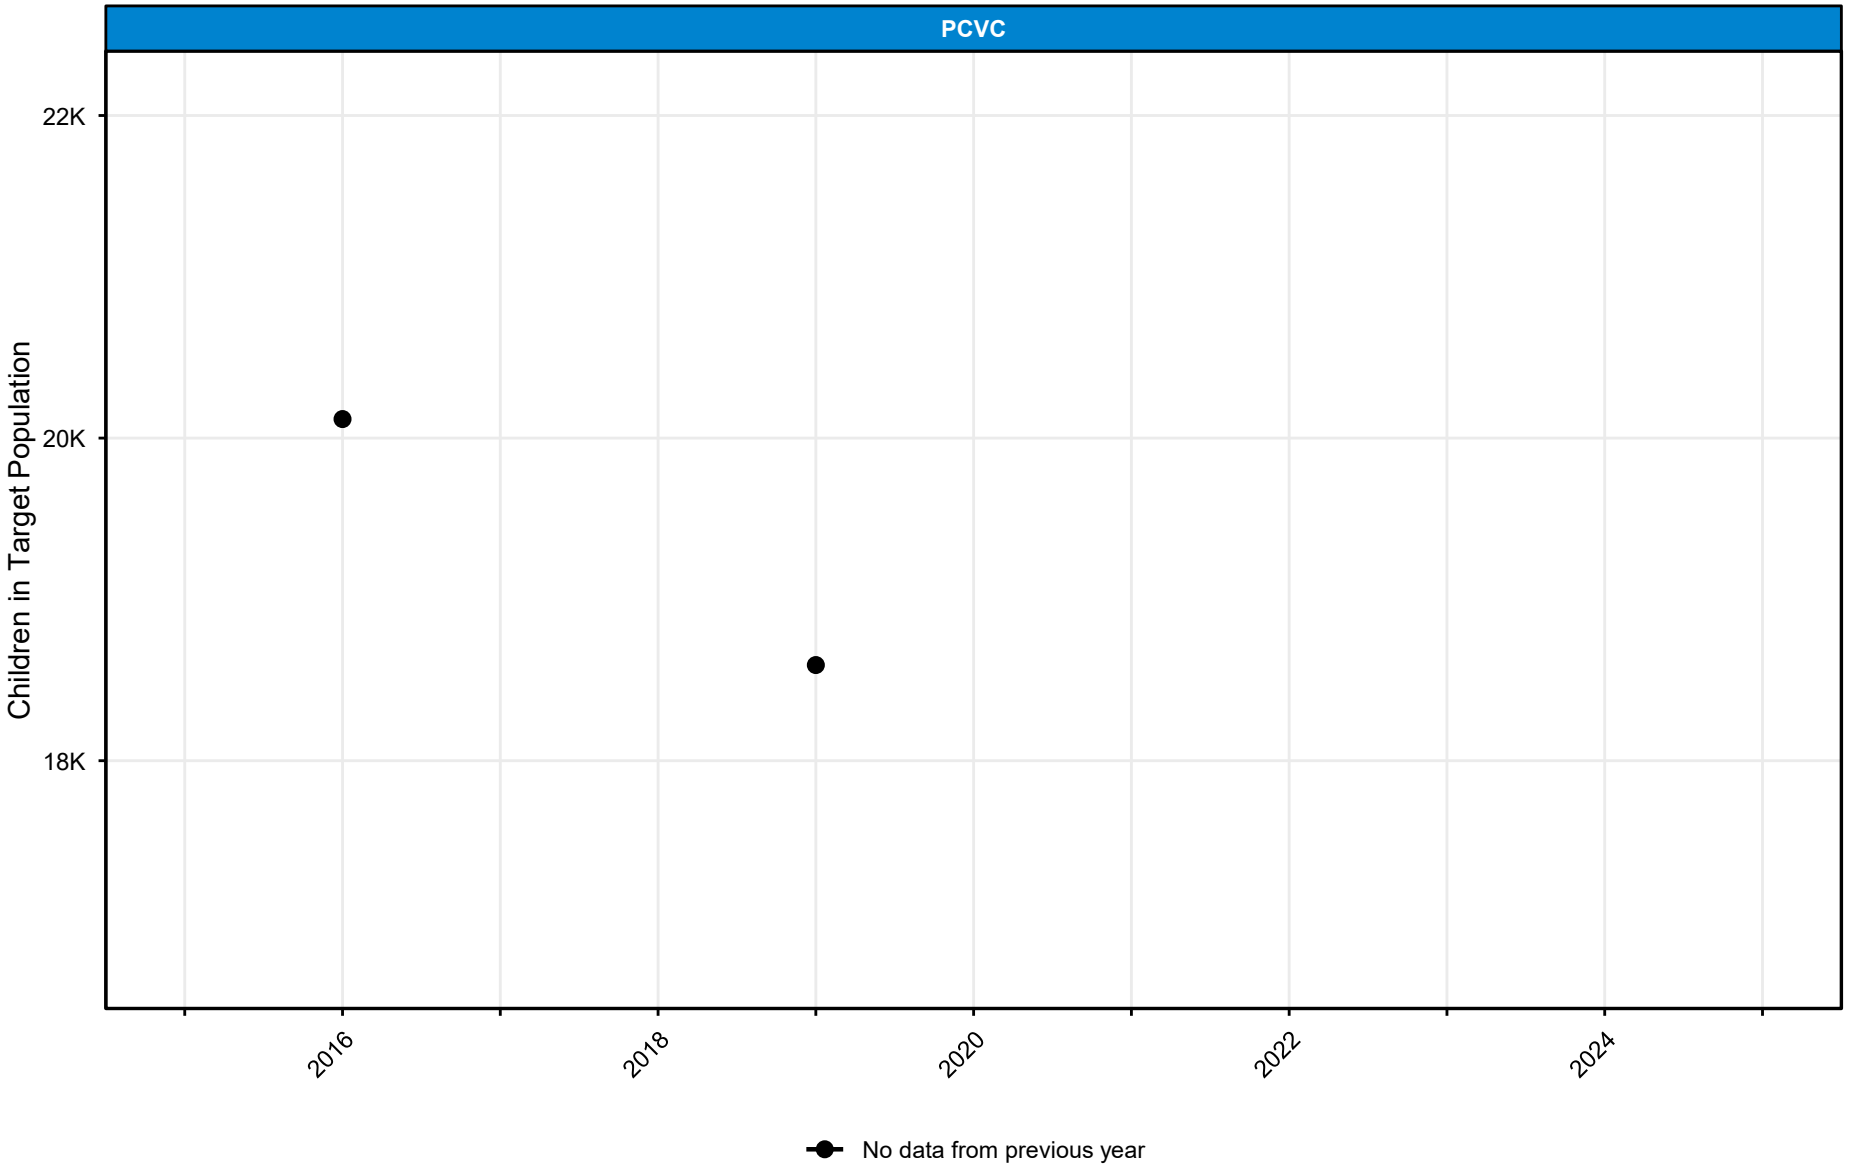

Explanation of how the denominators (target population) are obtained.

Admin Data Comments: Denominator Accuracy (2021–2025)

Year	Comment
2025	These vaccines are administered during a specific school year, when children attend a systematic health check-up, so the ideal denominator would be the number of children in the relevant school grade. However, as data on the exact number of children by grade are not available, birth cohorts are used as an approximation. This approach does not account for children who enter school later than usual, which may slightly underestimate the calculated vaccination coverage.
2024	These vaccines are administered during a specific school year when children undergo a systematic health check-up, so the denominator should ideally be the number of children in that grade. However, since data on the exact number of children per grade is unavailable, we use birth cohorts as an approximation. This approach does not account for children who enter school later than usual, which slightly lowers the calculated vaccination coverage.
2023	No comment provided
2022	No comment provided
2021	No comment provided

Factors limiting the accuracy of the denominator as reported by Slovenia.

Number of Children in Target Population by Vaccine and Year, Slovenia, 2015–2025

NOTE: Not enough denominator data to calculate percent change for: DTP1, DTP3, Hib3, MCV1, MCV2, RCV1, IPV1, HepB3, IPVC

Target population (denominator) by vaccine and year. Points are colored by the magnitude of year-on-year change: green for less than 5%, orange for 5–10%, and red for greater than 10%. Black points indicate there was no denominator data in the previous year (unable to calculate percent change). Light blue shading highlights years where the direction of change switches unexpectedly.

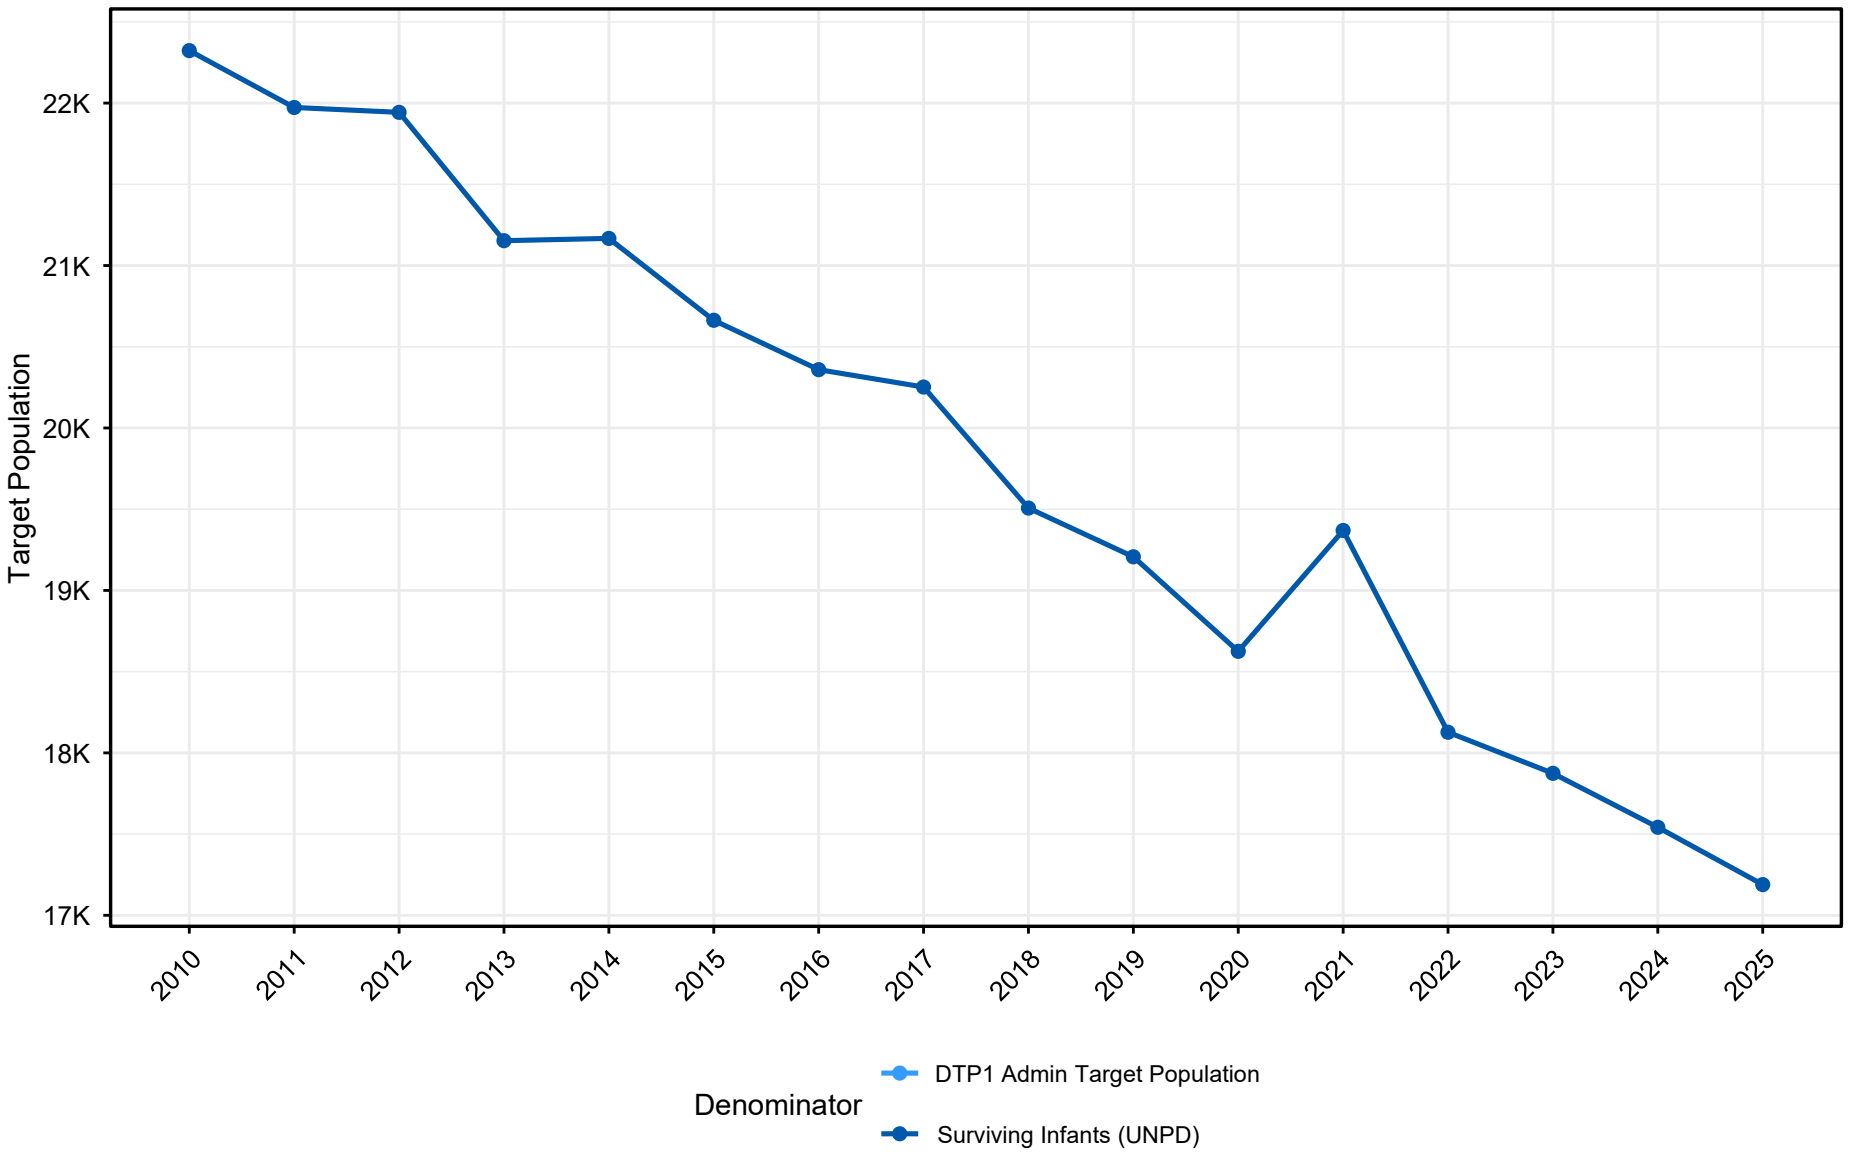

Target populations should follow a smooth, steady trajectory. Sudden directional switches are demographically unnatural and typically indicate administrative errors, shifting census boundaries, or changes in reporting sources.

Genuine switches are rare and generally limited to extreme disruptions such as humanitarian crises, cross-border migrations, or very small island populations.

unicef World Health Organization

WUENIC 2025 revision

Live Births & Surviving Infants (UNPD) vs. Admin Denominators, Slovenia, 2010–2025

NOTE: BCG is not in Slovenia's current schedule; no Live Births data available.
Data from 2024 World Population Prospects (WPP) revision.

Comparison of trends in live births and surviving infants, 2010–2025.

Live births is used is the denominator for BCG and HepBB.

Surviving infants is used as the denominator for other vaccines given in the first year of life.

Admin target populations are reported by the country, while the United Nations Population Division (UNPD) produces the World Population Prospects (WPP) data.

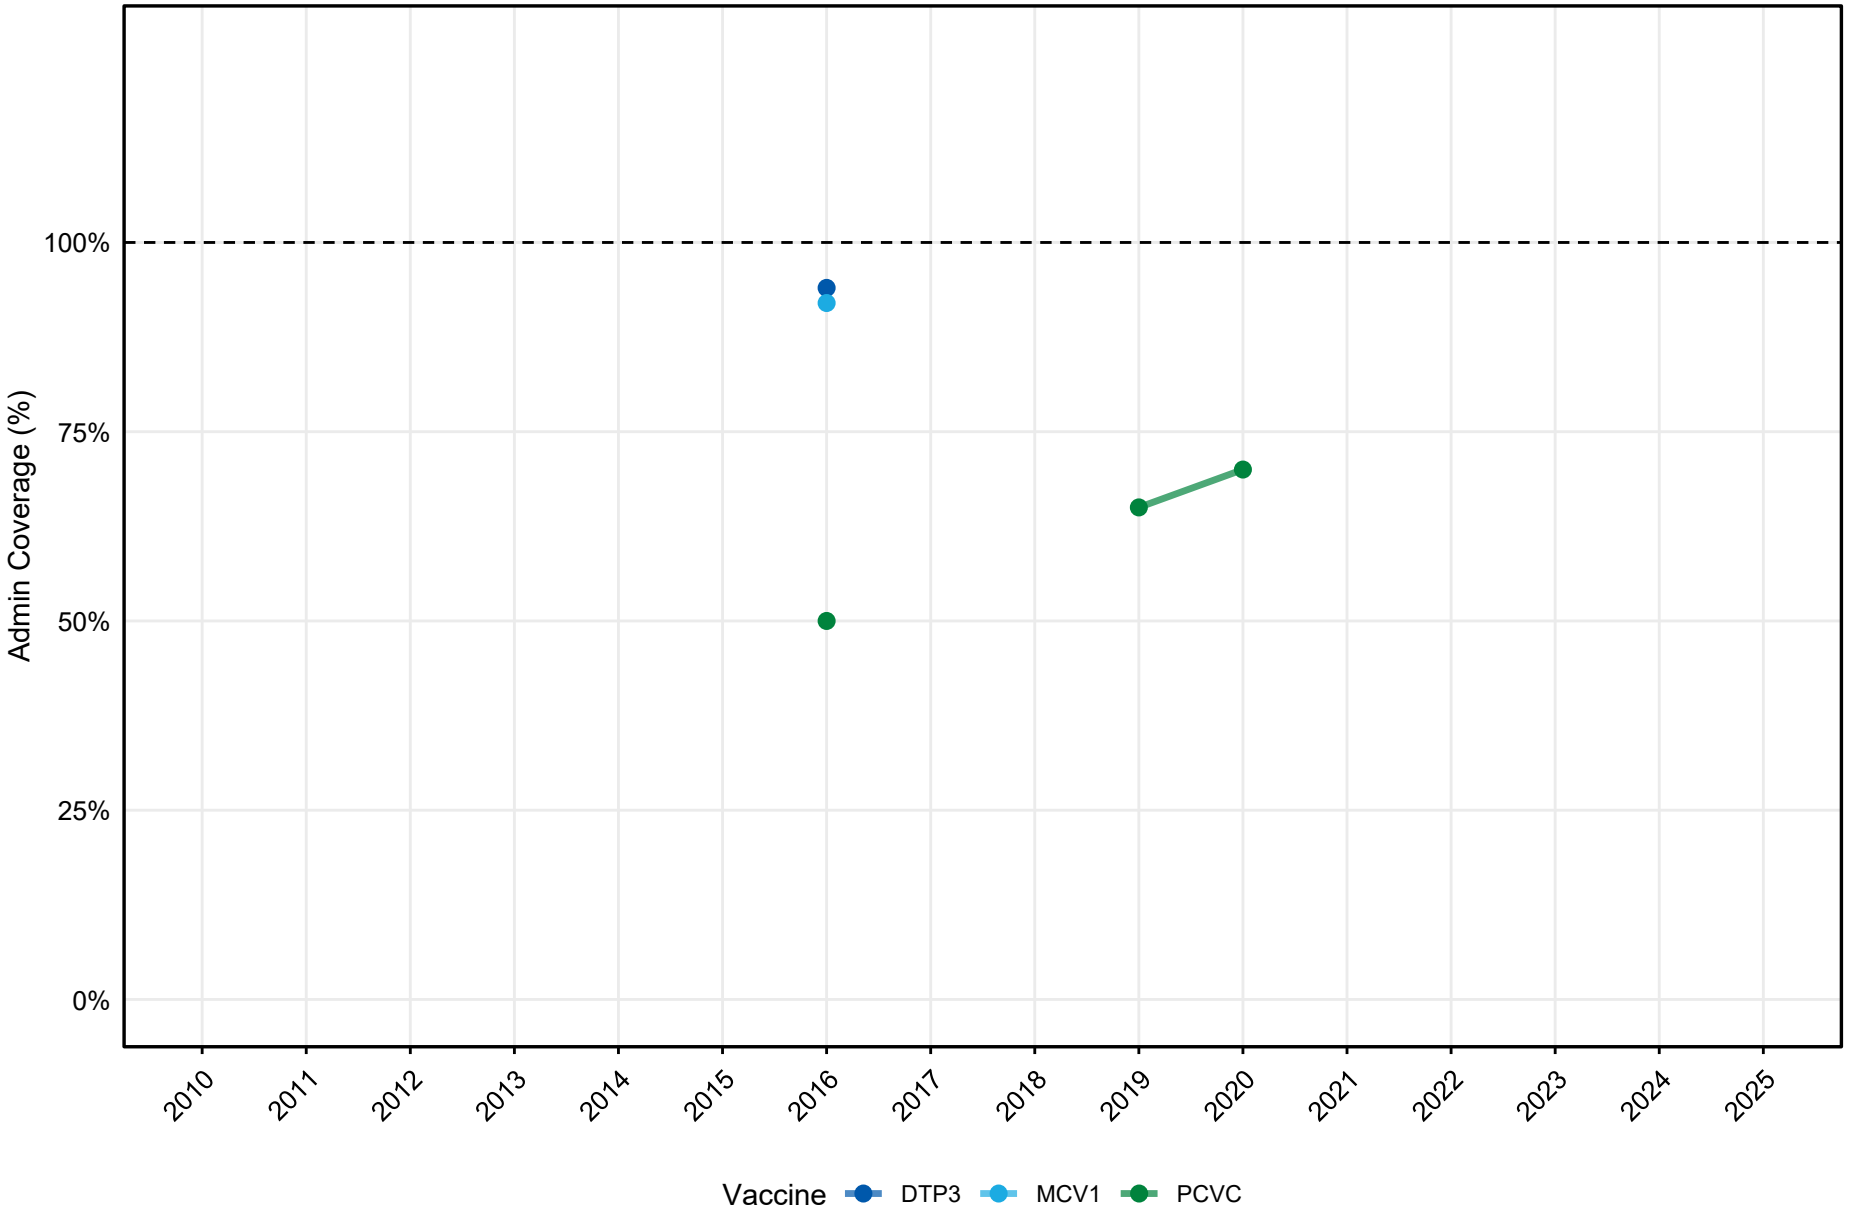

UNPD is the United Nations Population Division.

WUENIC 2025 revision

Coverage of Vaccines Recommended at the Same Age

Admin Coverage of Vaccines Administered at 11 to 18 months, Slovenia, 2010–2025

Admin coverage of WUENIC vaccines co-administered at the 11 to 18 months visit per the national schedule.

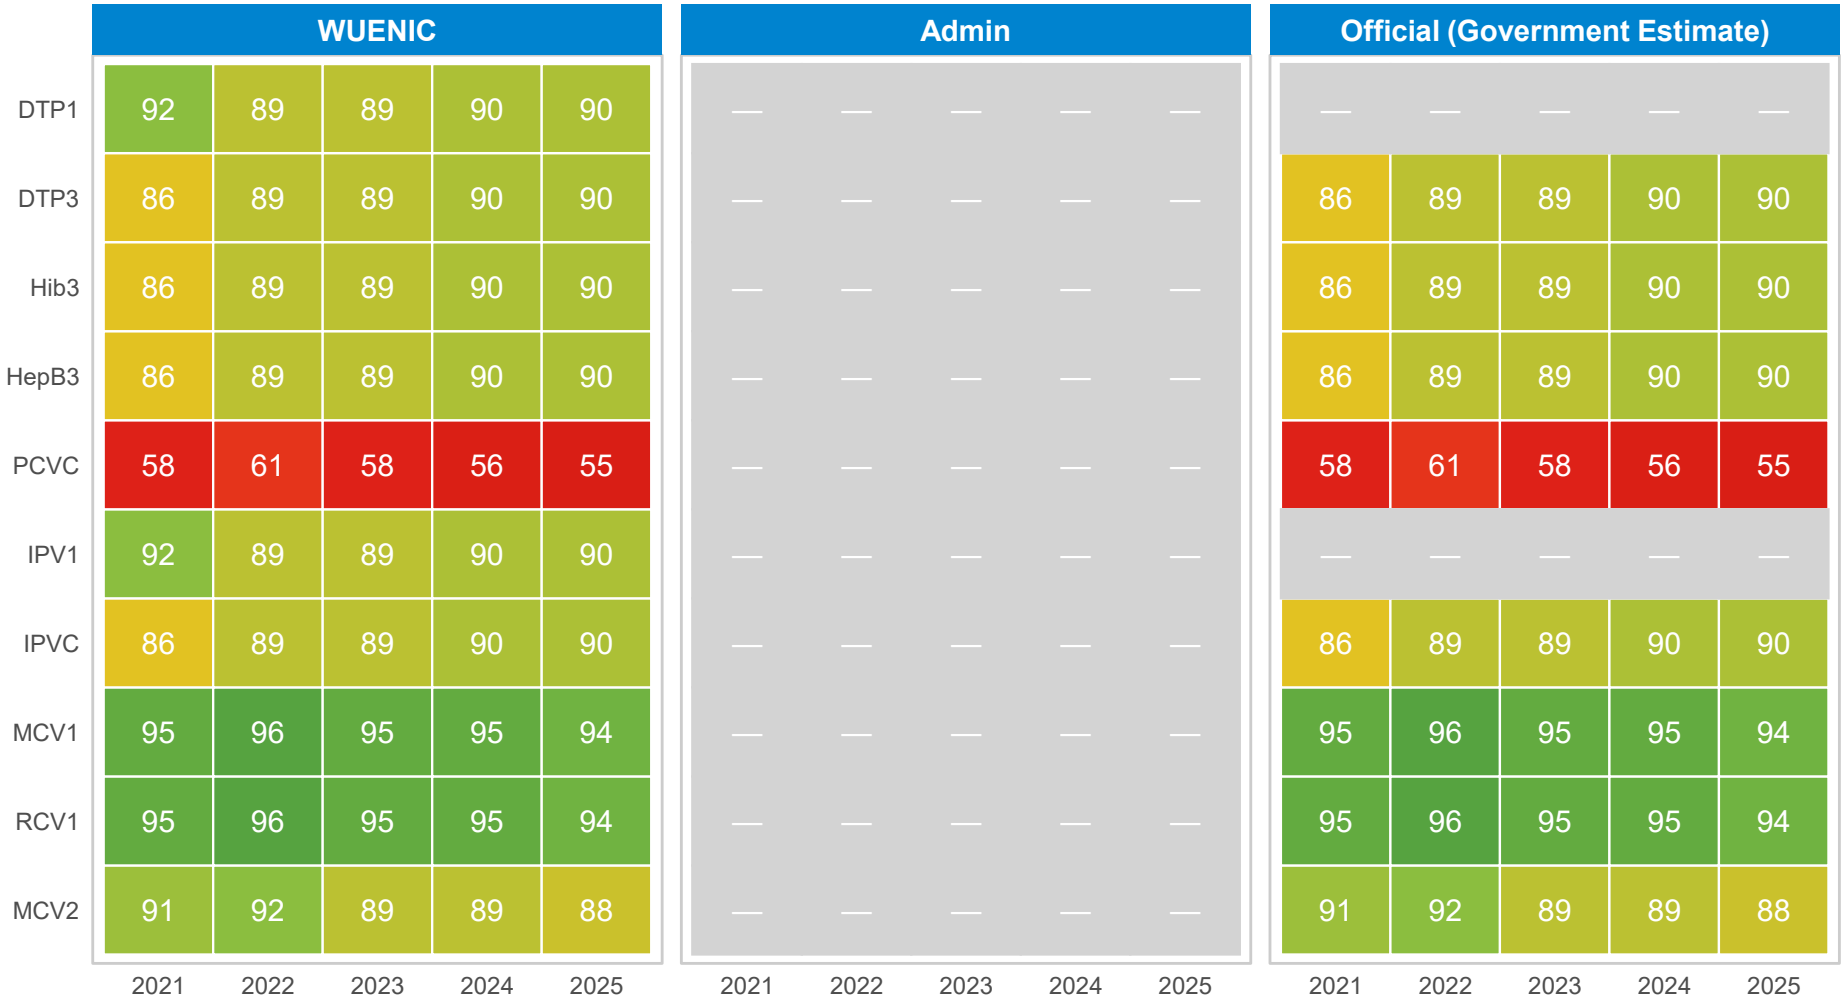

unicef

World Health Organization

WUENIC 2025 revision

Coverage Comparison Between WUENIC, Admin, and Official Estimates

Coverage Trends by Vaccine and Source, Slovenia, 2021–2025

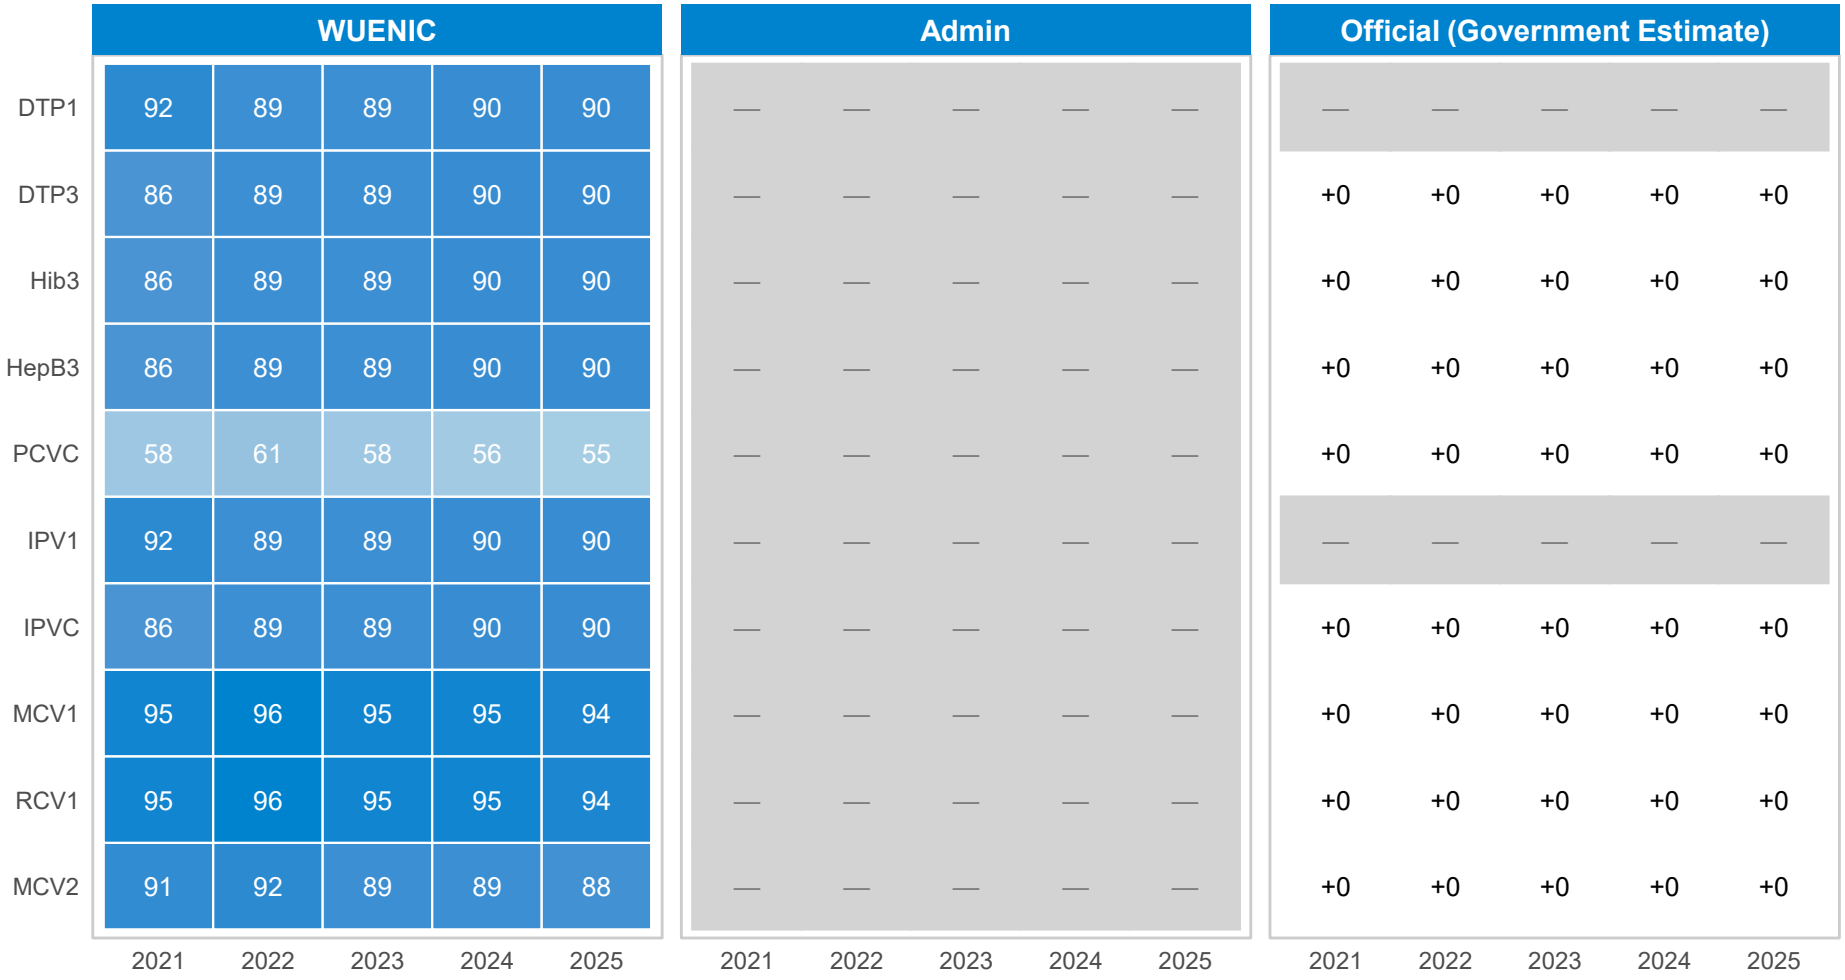

WUENIC HPV coverage estimates not included.
White = not yet introduced or not reported. Grey = missing data.
Survey panel not presented as Slovenia reported no survey data.

Coverage by vaccine and data source (WUENIC, Admin, Official, Survey) for the most recent 5 years.

unicef World Health Organization

WUENIC 2025 revision

Coverage vs. WUENIC Estimates by Source, Slovenia, 2021–2025

WUENIC coverage 60 70 80 90

Difference in pp vs. WUENIC −10pp −5pp 0 +5pp +10pp

Missing Data

WUENIC panel shows absolute coverage. All other panels show percentage point difference vs. WUENIC estimate.

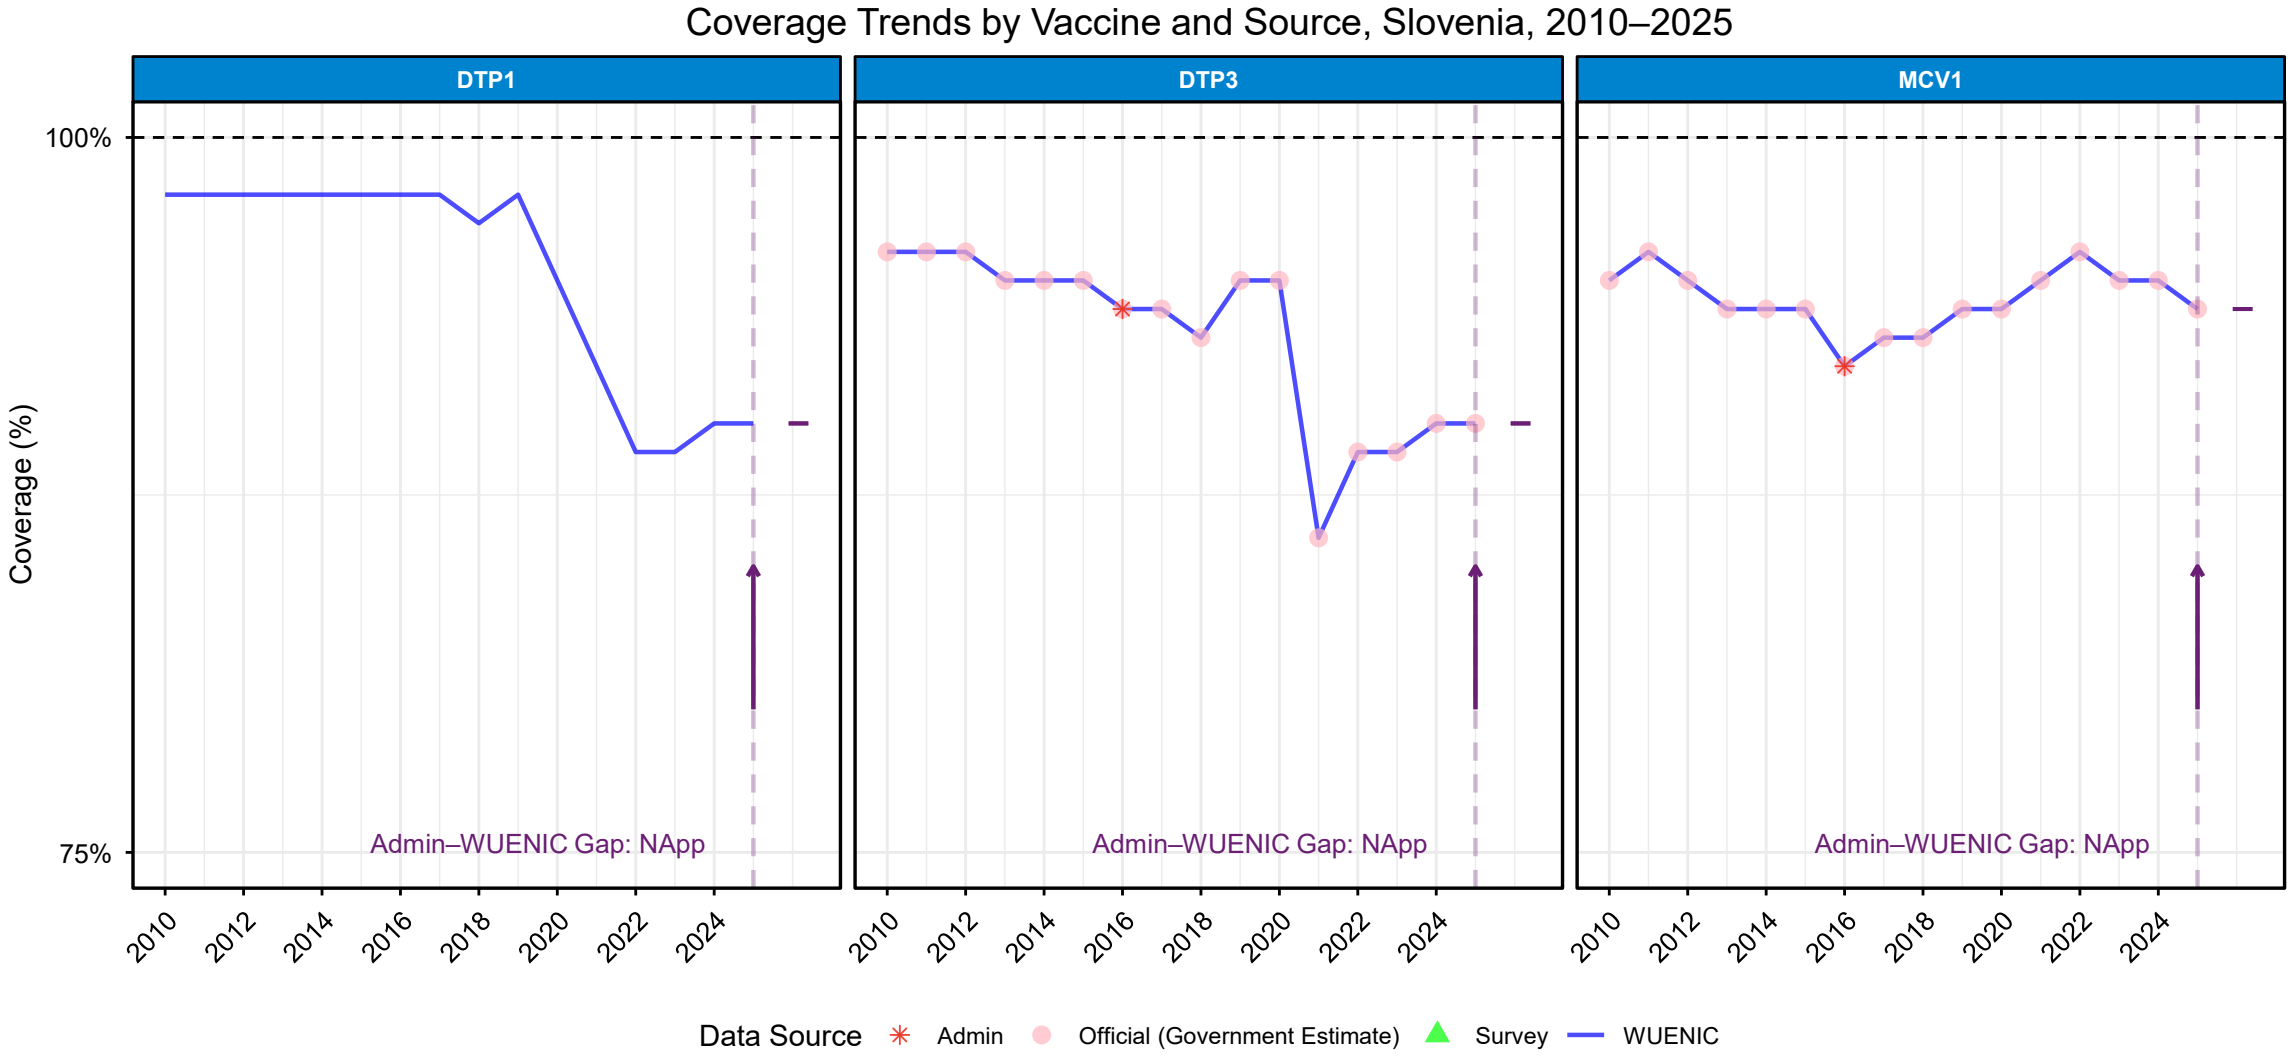

White = not yet introduced or not reported. Grey = missing data.
Survey panel not presented as Slovenia reported no survey data.

Difference in percentage points between administrative, official, and survey coverage and WUENIC estimates (e.g., Admin - WUENIC) for the most recent 5 years.

A difference of zero indicates that the coverage source and WUENIC estimate are identical, usually indicating that source informed the WUENIC estimate.

unicef World Health Organization

Actionable Health Analytics for Decision-making (AHEAD)

AHEAD is a UNICEF initiative that strengthens the quality and use of routine immunization data by working closely with Ministries of Health and national Expanded Programme on Immunization (EPI) teams.

AHEAD begins with a systematic review of routine immunization data to identify and address data quality issues, including missing or inconsistent reporting, internal inconsistencies, implausible year-to-year fluctuations, and inaccuracies in target population denominators. Through a collaborative process with national teams, reported data are reviewed, cleaned, and validated, while alternative denominator sources are assessed to improve the accuracy and interpretation of vaccination coverage estimates.

Building on these strengthened data, AHEAD produces timely subnational immunization analytics at regional, district, and health facility levels to identify priority areas, monitor trends, and support evidence-based planning and targeted interventions.

Please contact UNICEF for more information at: data@unicef.org
