BACKGROUND NOTE: Each year WHO and UNICEF jointly review reports submitted by Member States regarding national immunization coverage, finalized survey reports as well as data from the published and grey literature. Based on these data, with due consideration to potential biases and the views of local experts, WHO and UNICEF attempt to distinguish between situations where the available empirical data accurately reflect immunization system performance and those where the data are likely to be compromised and present a misleading view of immunization coverage while jointly estimating the most likely coverage levels for each country.

WHO and UNICEF estimates are country-specific; that is to say, each country’s data are reviewed individually, and data are not borrowed from other countries in the absence of data. Estimates are not based on ad hoc adjustments to reported data; in some instances empirical data are available from a single source, usually the nationally reported coverage data. In cases where no data are available for a given country/vaccine/year combination, data are considered from earlier and later years and interpolated to estimate coverage for the missing year(s). In cases where data sources are mixed and show large variation, an attempt is made to identify the most likely estimate with consideration of the possible biases in available data. For methods see:

* Brown et al. 2013. An introduction to the grade of confidence used to characterize uncertainty around the WHO and UNICEF estimates of national immunization coverage.

DATA SOURCES.

ADMINISTRATIVE coverage: Reported by national authorities and based on aggregated administrative reports from health service providers on the number of vaccinations administered during a given period (numerator data) and reported target population data (denominator data). May be biased by inaccurate numerator and/or denominator data.

OFFICIAL coverage: Estimated coverage reported by national authorities that reflects their assessment of the most likely coverage based on any combination of administrative coverage, survey-based estimates or other data sources or adjustments. Approaches to determine coverage may differ across countries.

SURVEY coverage: Based on estimated coverage from population-based household surveys among children aged 12-23 months or 24-35 months following a review of survey methods and results. Information is based on the combination of vaccination history from documented evidence or caregiver recall. Survey results are considered for the appropriate birth cohort based on the period of data collection.

ABBREVIATIONS

BCG: percentage of births who received one dose of Bacillus Calmette Guerin vaccine.

DTP1 / DTP3: percentage of surviving infants who received the 1st / 3rd dose, respectively, of diphtheria and tetanus toxoid with pertussis containing vaccine.

Pol3: percentage of surviving infants who received the 3rd dose of polio containing vaccine. May be oral or inactivated polio vaccine.

IPV1: percentage of surviving infants who received at least one dose of inactivated polio vaccine. In countries utilizing an immunization schedule recommending either (i) a primary series of three doses of oral polio vaccine (OPV) plus at least one dose of IPV where OPV is included in routine immunization and/or campaign or (ii) a sequential schedule of IPV followed by OPV, WHO and UNICEF estimates for IPV1 reflect coverage with at least one routine dose of IPV among infants <1 year of age among countries. For countries utilizing IPV containing vaccine use only, i.e., no recommended dose of OPV, the WHO and UNICEF estimate for IPV1 corresponds to coverage for the 1st dose of IPV.

Production of IPV coverage estimates, which begins in 2015, results in no change of the estimated coverage levels for the 3rd dose of polio (Pol3). For countries recommending routine immunization with a primary series of three doses of IPV alone, WHO and UNICEF estimated Pol3 coverage is equivalent to estimated coverage with three doses of IPV. For countries with a sequential schedule, estimated Pol3 coverage is based on that for the 3rd dose of polio vaccine regardless of vaccine type.

MCV1: percentage of surviving infants who received the 1st dose of measles containing vaccine. In countries where the national schedule recommends the 1st dose of MCV at 12 months or later based on the epidemiology of disease in the country, coverage estimates reflect the percentage of children who received the 1st dose of MCV as recommended.

MCV2: percentage of children who received the 2nd dose of measles containing vaccine according to the nationally recommended schedule.

RCV1: percentage of surviving infants who received the 1st dose of rubella containing vaccine. Coverage estimates are based on WHO and UNICEF estimates of coverage for the dose of measles containing vaccine that corresponds to the first measles-rubella combination vaccine. Nationally reported coverage of RCV is not taken into consideration nor are the data represented in the accompanying graph and data table.

HepB: percentage of births which received a dose of hepatitis B vaccine within 24 hours of delivery. Estimates of hepatitis B birth dose coverage are produced only for countries with a universal birth dose policy. Estimates are not produced for countries that recommend a birth dose to infants born to HepB virus-infected mothers only or where there is insufficient information to determine whether vaccination is within 24 hours of birth.

HepB3: percentage of surviving infants who received the 3rd dose of hepatitis B containing vaccine following the birth dose.

Hib3: percentage of surviving infants who received the 3rd dose of Haemophilus influenzae type b containing vaccine.

RotaC: percentage of surviving infants who received the final recommended dose of rotavirus vaccine, which can be either the 2nd or the 3rd dose depending on the vaccine.

PcV3: percentage of surviving infants who received the 3rd dose of pneumococcal conjugate vaccine.

PfV: percentage of surviving infants who received one dose of yellow fever vaccine in countries where YFV is part of the national immunization schedule for children or is recommended in at risk areas; coverage estimates are annualized for the entire cohort of surviving infants.

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- **Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2020 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.**
- **Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.**
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

**Description:**

- **2020:** Estimate based on coverage reported by national government. WHO and UNICEF are aware of a 2019 Multiple Indicator Cluster Survey and await the final results. GoC=R+ D+
- **2019:** Estimate based on coverage reported by national government. Estimate of 87 percent changed from previous revision value of 88 percent. GoC=R+ D+
- **2018:** Estimate based on coverage reported by national government. Estimate of 93 percent changed from previous revision value of 94 percent. GoC=R+ D+
- **2017:** Since 2017 reported numerator and denominator follow a consistent trend. Programme reported district-level vaccine stock-outs. Estimate of 92 percent changed from previous revision value of 93 percent. Estimate challenged by: R-
- **2016:** Reported data calibrated to 2011 and 2017 levels. Reported data excluded because 103 percent greater than 100 percent. Estimate of 93 percent changed from previous revision value of 94 percent. Estimate challenged by: R-
- **2015:** Reported data calibrated to 2011 and 2017 levels. Reported data excluded because 102 percent greater than 100 percent. Estimate of 94 percent changed from previous revision value of 95 percent. Estimate challenged by: R-
- **2014:** Reported data calibrated to 2011 and 2017 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: R-
- **2013:** Reported data calibrated to 2011 and 2017 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Apparent decline in coverage perhaps due to an increase in target population by 24 percentage between 2011 and 2012. Number of children vaccinated in 2012 decreased in part to insecurity limiting outreach activities (GAVI Report, 2013). Estimate challenged by: R-
- **2012:** Reported data calibrated to 2011 and 2017 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Apparent decline in coverage perhaps due to an increase in target population by 24 percentage between 2011 and 2012. Number of children vaccinated in 2012 decreased in part to insecurity limiting outreach activities (GAVI Report, 2013). Estimate challenged by: R-
- **2011:** Estimate of 99 percent assigned by working group. Estimate is based on survey result. Reported data excluded because 112 percent greater than 100 percent. Estimate challenged by: R-
- **2010:** Reported data calibrated to 2005 and 2011 levels. Reported data excluded because 109 percent greater than 100 percent. Estimate challenged by: R-
- **2009:** Reported data calibrated to 2005 and 2011 levels. Estimate challenged by: D-R-

As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

••• Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2020 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.

•• Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source; [R-], [D-], or [S-], challenges the estimate.

• There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Description:

2020: Estimate based on coverage reported by national government. WHO and UNICEF are aware of a 2019 Multiple Indicator Cluster Survey and await the final results. GoC=R+ D+

2019: Estimate based on coverage reported by national government. Estimate of 89 percent changed from previous revision value of 90 percent. GoC=R+ D+

2018: Estimate based on coverage reported by national government. Estimate of 93 percent changed from previous revision value of 94 percent. GoC=R+ D+

2017: Since 2017 reported numerator and denominator follow a consistent trend. Estimate of 92 percent changed from previous revision value of 93 percent. GoC=R+ D+

2016: DTP1 coverage estimated based on DTP3 coverage of 95. Reported data excluded because 104 percent greater than 100 percent. Estimate of 98 percent changed from previous revision value of 94 percent. Estimate challenged by: R-

2015: DTP1 coverage estimated based on DTP3 coverage of 98. Reported data excluded because 102 percent greater than 100 percent. Estimate challenged by: R-

2014: DTP1 coverage estimated based on DTP3 coverage of 99. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: R-

2013: DTP1 coverage estimated based on DTP3 coverage of 99. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: R-

2012: Reported data calibrated to 2011 and 2017 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Apparent decline in coverage perhaps due to an increase in target population by 24 percentage between 2011 and 2012. Number of children vaccinated in 2012 decreased in part to insecurity limiting outreach activities (GAVI Report, 2013). Estimate challenged by: R-

2011: Estimate of 99 percent assigned by working group. Estimate is based on survey result. Reported data excluded because 111 percent greater than 100 percent. Estimate challenged by: R-

2010: Reported data calibrated to 2005 and 2011 levels. Reported data excluded because 105 percent greater than 100 percent. Estimate challenged by: R-

2009: Reported data calibrated to 2005 and 2011 levels. Estimate challenged by: D-R-

2012: Reported data calibrated to 2011 and 2017 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: R-

2011: Estimate of 97 percent assigned by working group. Estimate is based on DTP3. Measles vaccination recommended between 12 and 23 months of age. Survey cohort underestimates coverage. Honduras Demographic and Health Survey 2011-2012 results ignored by working group. Measles vaccination recommended between 12 and 23 months of age. Survey cohort underestimates coverage. Reported data excluded because 107 percent greater than 100 percent. Estimate challenged by: R-

2010: Reported data calibrated to 2000 and 2011 levels. Reported data excluded because 101 percent greater than 100 percent. Estimate challenged by: D-R-

2009: Reported data calibrated to 2000 and 2011 levels. Estimate challenged by: D-R-

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

July 8, 2021; page 9  WHO and UNICEF estimates of national immunization coverage - next revision available July 15, 2022  data received as of July 6, 2021
The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2020 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+] [S+] [D+]; and no data source, [R-], [D-], [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Honduras - MCV2

Description:

Coverage estimates for the second dose of measles containing vaccine are for children by the nationally recommended age.

2020: Estimate based on coverage reported by national government. WHO and UNICEF are aware of a 2019 Multiple Indicator Cluster Survey and await the final results. GoC=R+ D+

2019: Estimate based on coverage reported by national government. GoC=R+ D+

2018: Estimate based on coverage reported by national government. Second dose of measles-containing vaccine introduced in July 2018. Estimate likely overestimated based on mid-year introduction. GoC=R+ D+

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

••• Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2020 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.

•• Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-]; challenges the estimate.

• There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Description:

For this revision, coverage estimates for the first dose of rubella containing vaccine are based on WHO and UNICEF estimates of coverage of measles containing vaccine. Nationally reported coverage of rubella containing vaccine is not taken into consideration nor are they represented in the accompanying graph and data table.

2020: Estimate based on estimated MCV1. WHO and UNICEF are aware of a 2019 Multiple Indicator Cluster Survey and await the final results. GoC=R+ D+
2019: Estimate based on estimated MCV1. Estimate of 89 percent changed from previous revision value of 87 percent. GoC=R+ D+
2018: Estimate based on estimated MCV1. Estimate of 91 percent changed from previous revision value of 89 percent. GoC=R+ D+
2017: Estimate based on estimated MCV1. Estimate of 98 percent changed from previous revision value of 96 percent. GoC=R+ D+
2016: Estimate based on estimated MCV1. Estimate of 98 percent changed from previous revision value of 96 percent. Estimate challenged by: R-
2015: Estimate based on estimated MCV1. Estimate of 98 percent changed from previous revision value of 96 percent. Estimate challenged by: R-

### Description:

**2020:** Estimate based on coverage reported by national government. WHO and UNICEF are aware of a 2019 Multiple Indicator Cluster Survey and await the final results. GoC=R+ D+

**2019:** Estimate based on coverage reported by national government. Estimate of 78 percent changed from previous revision value of 75 percent. GoC=R+ D+

**2018:** Estimate based on coverage reported by national government. Estimate of 82 percent changed from previous revision value of 79 percent. GoC=R+ D+

**2017:** Since 2017 reported numerator and denominator follow a consistent trend. Estimate of 78 percent changed from previous revision value of 75 percent. GoC=R+ D+

**2016:** Estimate of 80 percent assigned by working group. Estimate is informed by the relative relationship between the reported number of children vaccinated with HepB birth dose and the number vaccinated with BCG. Estimate challenged by: R-

**2015:** Estimate of 80 percent assigned by working group. Estimate is informed by the relative relationship between the reported number of children vaccinated with HepB birth dose and the number vaccinated with BCG. Estimate challenged by: R-

**2014:** Reported data calibrated to 2011 and 2015 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: R-

**2013:** Reported data calibrated to 2011 and 2015 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: D-R-

**2012:** Reported data calibrated to 2011 and 2015 levels. Reported data excluded. Reported coverage levels and underlying target populations are inconsistent over the period 2012-2016. WHO and UNICEF encourage a revision of the reported coverage time series using a consistent target population for at least the prior ten years. Estimate challenged by: D-R-

**2011:** Estimate of 77 percent assigned by working group. Programme reports 98 percent coverage in 78 percent of the target population reflecting children born in hospital. Estimate reflects coverage achieved in total annual national target population. Estimate challenged by: D-R-

**2010:** Estimate of 78 percent assigned by working group. Programme reports 101 percent coverage in 78 percent of the target population reflecting children born in hospital. Estimate reflects coverage achieved in total annual national target population. Estimate challenged by: D-R-

**2009:** Programme reports 98 percent coverage in 74 percent of the target population reflecting children born in hospital. Estimate reflects coverage achieved in total annual national target population. Estimate challenged by: D-R-
