Looking ahead to ending child marriage

Observed and required rates of progress

Figure 13. Average annual rate of reduction (%) in the percentage of women aged 20 to 24 years who were first married or in union before age 18, observed and required for elimination

NOTES

Data on the national prevalence, burden of child marriage and proportions by wealth, residence and education, as displayed in Figures 1, 3 and 4, are sourced from the Demography and Health Module Survey (EMDS) 2015. The datasets for this survey were not available for the analysis required for the remaining figures in this profile, so all other figures use data sourced from the Demographic and Health Survey 2010. Data on the legal age at marriage are sourced from the World Bank, Women, Business and the Law, 2018 dataset. Demographic data are from the United Nations, Department of Economic and Social Affairs, Population Division (2022), World Population Prospects 2022, Online edition. Data on regional prevalence, as displayed in the map, are sourced from the Demographic and Health Survey 2010. Maps do not reflect a position by UNICEF on the legal status of any country or territory or the delimitation of any frontiers. Confidence intervals are not shown in this profile; therefore, caution is warranted in interpreting the results since apparent differences may not be significant. All references to 'marriage' or 'child brides' include both formal marriage and informal unions in which women started living together with a partner as if married. Global estimates are based on a subset of 103 countries with comparable available data from 2015 to 2022, covering 78 per cent of the global female population. Regional estimates represent data covering at least 50 per cent of the female population. Trends in the prevalence of child marriage were calculated taking into account data from all available surveys. For statistical purposes, 'elimination' is defined here as a child marriage prevalence of less than 1 per cent. Values presented are based on at least 25 unweighted cases. Data for some indicators and population groups are suppressed due to insufficient numbers of cases to perform the analysis. Indicators marked as 'n/a' indicate either the value was suppressed or data were not collected. Numbers expressed in thousands and
