Maternal and Newborn Health Disparities in Lesotho

Key Facts

Lesotho reference table

Demographic indicators		
Total population (thousands) ¹	2015	2,135
Total live births (thousands) ¹	2015	61
Total Fertility Rate (number of children per woman) ¹	2015	3
Adolescent birth rate (per 1,000 women 15-19) ¹⁰	2013	94
Impact indicators		
Maternal mortality ratio (per 100,000 live births) ⁴	2015	487
Average annual rate of MMR reduction between 1990 and 2015 (%) ⁵	2015	1
Lifetime risk of maternal death: 1 in x ⁴	2015	61
Stillbirth rate (per 1,000 total births) ⁶	2015	20
Preterm birth rate (per 100 live births) ⁷	2010	12
Under-five mortality rate (per 1,000 live births) ³	2015	90
Under-five deaths that are newborn (%) ³	2015	37
Neonatal mortality rate (per 1,000 live births) ³	2015	33
Neonatal deaths (thousands) ³	2015	2
Service Delivery		
Availability of EmONC Services (% of minimum acceptable level) ⁸	2004	29
Physician density (per 1,000 population) ⁹	2003	<0.1
Nurse and midwife density (per 1,000 population) ⁹	2003	0.6

Maternal and Newborn Health Disparities

Lesotho

In 2015, 60,000 babies were born in Lesotho, or approximately 200 every day.¹

Among young women (aged 20-24), 14 percent gave birth by age 18.²

Approximately 6 babies will die each day before reaching their first month³; 3 stillbirths occur every day.⁶

Neonatal mortality rate:

Lesotho's neonatal mortality rate (NMR)⁴ is 33 deaths per 1,000 live births.³

NMR⁵ in rural areas is 38 deaths per 1,000 live births and 22 deaths per 1,000 live births in urban areas for an urban-to-rural ratio of 0.6.²

NMR⁵ among the poorest households is 33 neonatal deaths per 1,000 live births, compared to 22 deaths per 1,000 live births among the richest households.²

Neonatal mortality rates, by background characteristics, 2014

Neonatal mortality rate

for newborns with mothers:

The NMR for younger mothers (48 per 1,000 live births) is 1.6 times higher than for mothers aged 20-29 (30 per 1,000 live births).²

1 in 7
young women
(aged 20-24)
have given birth
by age 18.²

Newborns with better educated mothers are

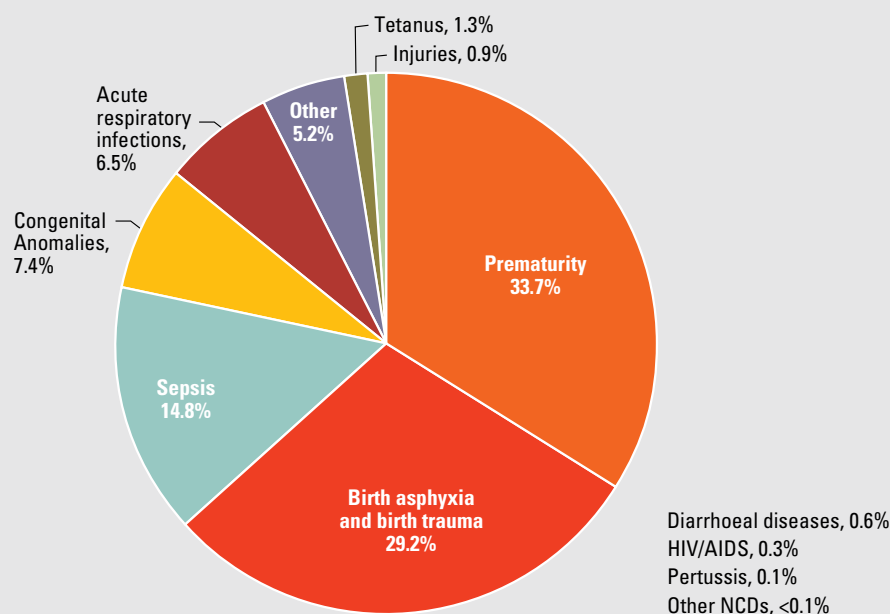

1:1

as likely to die during the first month of life compared to those born to mothers with no education.²

Lesotho – Causes of Neonatal Mortality, 2015

In Lesotho, the main causes of neonatal deaths in 2015 were prematurity (33.7 percent), birth asphyxia (29.2 percent) and sepsis (14.8 percent).¹¹

Disparities in key maternal and newborn health interventions, Lesotho, 2014²

		Coverage – care for mothers					
		Demand for family planning satisfied by modern methods (%)	Antenatal care coverage at least 4 times (%) ^a	Skilled attendant at birth (%)	Institutional delivery (%)	Delivered by caesarean section (%)	Postnatal care of mothers within 2 days (%)
Residence	Urban	82.4	82.5	89.7	88.9	12.1	69.7
	Rural	73.1	66.3	73.1	71.4	8.7	59.2

Household Wealth	Richest	82.7	85.3	94.0	92.9	14.5	79.9
	Poorest	66.6	58.1	60.1	56.9	5.5	45.6
Household wealth ratio (richest to poorest)		1.2	1.5	1.6	1.6	2.6	1.8
Mother's age	Less than 20		66.5	82.5	80.6	10.3	63.0
	20-34		71.7	78.1	76.7	9.0	61.9
	35-49		69.4	68.4	67.8	12.9	60.8
Mother's education	No education	54.5	67.5	(48.6)	(51.8)	(3.9)	
	Primary	71.4	63.6	66.4	64.7	7.4	51.8
	Secondary	80.0		87.1	86.0	11.0	68.2
	Higher	82.2		97.2	95.7	17.1	82.5
Mother's education ratio (highest to lowest)		1.5		2.0	1.8	4.4	

Maternal and newborn health coverage indicators

By residence:²

- In rural areas, 72 percent of women made at least 4 antenatal care (ANC) visits compared to 80 percent in urban areas.
- Coverage of skilled attendance at birth is 73 percent in rural areas, compared to 90 percent in urban areas.
- 19 percent of newborns in rural areas receive postnatal care (PNC) within 2 days after birth, compared to 18 percent in urban areas.

By household wealth:²

- Nearly all newborns in the richest households (96 percent) were weighed at birth, compared to 68 percent of newborns in the poorest households.
- Only 60 percent of deliveries in the poorest households had a skilled attendant at birth, compared to 94 percent of deliveries among the richest households.
- 20 percent of newborns in the richest households receive PNC within 2 days after birth, compared to 16 percent among the poorest households.

Only **60%** of deliveries in the poorest households had a **skilled attendant at birth**, compared to...

...**94%** of deliveries in the richest households.

Coverage – care for newborns								Other	
Postnatal care of newborns within 2 days (%)	Newborn weighed at birth (%)	Early initiation of breast-feeding (%)	Exclusive breast-feeding (<6 months) (%)	BCG vaccine for newborn (%)	DPT 1 vaccination received (%)**	Tetanus protection for newborns (%)	Birth registration (%)	Births by age 18 (%) ^{a,#}	
18.0	92.4	63.7		98.6	99.3	79.1	53.9	8.7	Urban
18.5	79.7	65.9		97.8	97.9	72.4	40.1	15.5	Rural
1.0	1.2	1.0		1.0	1.0	1.1	1.3	0.6	Residence ratio (urban to rural)

Selected maternal and newborn health indicators, by region, 2014

By mother's age:²

- 67 percent of newborns born to young mothers (aged less than 20) were protected against tetanus, compared to 76 percent of newborns born to mothers aged 20-34.
- 78 percent of deliveries among mothers aged 20-34 have a skilled attendant at birth, compared to 83 percent of deliveries among younger mothers (aged less than 20).
- Their newborns receive low levels of postnatal care: 18 percent and 19 percent, respectively.

Disparities in key maternal and newborn health interventions, Lesotho, 2014²

Coverage – care for mothers						
	Demand for family planning satisfied by modern methods (%)	Antenatal care coverage at least 4 times (%) ^a	Skilled attendant at birth (%)	Institutional delivery (%)	Delivered by caesarean section (%)	Postnatal care of mothers within 2 days (%)

	64.8	56.7	62.8	60.8	3.8	40.9
Ratio (highest to lowest)	1.2	1.4	1.4	1.4	3.3	1.8

By mother's education:²

- 75 percent of newborns born to mothers with a higher education were protected against tetanus, compared to 73 percent among newborns born to mothers with a primary education.
- 66 percent of deliveries among mothers with a primary education had a skilled attendant at birth, compared to 97 percent of deliveries among mothers with a higher education.
- Nearly all newborns born to mothers with a higher education were weighed at birth (98 percent), compared to 74 percent of newborns born to mothers with a primary education.

By geographic regions:²

- Mokhotlong has the lowest coverage of newborns weighed at birth (67 percent), with the highest coverage in Qacha's Nek (95 percent).
- The region with the highest coverage of skilled birth attendance is Leribe with 85 percent; the lowest coverage is Mokhotlong with 63 percent – a difference of 1.4 times.
- Quthing has the highest coverage of PNC for newborns (within 2 days after birth) with 36 percent while Mokhotlong has the lowest coverage at 7 percent – a difference of 5.1 times.
